# The Benefits of Poly Furniture

- Made from 100% recycled plastic
- Poly lumber has a UV ray protector to minimize fading
- Maintenance free
- Will not mildew, crack, warp, or rot
- Will withstand the harshest environments
- Termite resistant

## WARRANTY

20 years residential use • 5 years commercial use

### Features

- Hidden screws where possible
- All stainless steel hardware
- Aluminum bracing where needed
- Powder coated steel swivel (50 Ball Bearing)

*Each piece of furniture is individually handcrafted by skilled artisans who utilize building methods handed down through the generations. We use only first-rate materials & responsible building practices. We are always adding to our line of products & customize to your specs for an additional price percentage.*

*Place yourself outdoors with our line of furniture and view the amazing possibilities with the integration of style & design. Consider adding a brightly colored pair to your outdoor decor for a fun splash of color!*

# POLY WOOD

PolyTuf HDPE plastic lumber is custom-extruded from purified blends of recycled plastics - the kind that come from milk and detergent bottles. Additional proprietary additives are compounded into each product to meet the specifications of each of our customers for their unique applications. UV - inhibited pigments, anti-oxidant processing aids, foaming agents and other compounds are introduced depending on the end use and each customer's performance requirements.

## FEATURES

- Manufactured to exacting specifications with tolerances to meet the toughest applications.
- Material is easily machined with any tools appropriate for working with real wood.
- Essentially maintenance free, with exceptional resistance to moisture, fading, insects, splinting, warping and other hazards of environmental exposure common to wood or wood fiber composite products.
- Requires no waterproofing, staining or other similar recurring maintenance other than an occasional washing with soap and water.
- High color stability UV pigment systems which minimize material breakdown from prolonged sun and weather exposure.
- Unlike most wood and wood composite products that quickly fade when exposed to the weather, PolyTuf™ has no wood fibers, retains its vibrant look for years and may fade only slightly over its entire service life.
- PolyTuf 1™ plastic lumber is well suited for exterior applications where resistance to weathering and minimal maintenance is required, and a quality appearance is essential. PolyTuf maintains its color stability and surface finish over its entire useful service life, and never needs to be sealed, painted or stained.

## ENVIRONMENT

Customers concerned about the environment can feel confident that they have made a good decision for the environment by using Tangent products.

Our plastic lumber products are manufactured with a blend of virgin and/or recycled HDPE plastics - the kinds found in milk bottles. In fact, we recycle over 115 million plastic bottles a year - keeping tons and tons of plastics out of landfills every year.

Unlike other types of plastic, HDPE is the most environmentally stable — giving off no harmful fumes into the environment. The Healthy Building Network recommends HDPE resin - based products as the most environmentally friendly plastic building materials.

Our products are designed to hold up to all kinds of adverse weather conditions for decades. And when they are finally ready to be replaced, the materials can be recycled again into new useful products.
