This 3-hour webinar provides investigators, medicolegal death professionals, and crime scene personnel with practical guidance for identifying unknown decedents. The training reviews traditional and advanced forensic methods, legal and jurisdictional considerations, and investigative resources available at the local, state, and federal levels. Participants will learn how to effectively use tools such as NamUs, NCIC, fingerprint analysis, dental comparison, medical/surgical implant research, anthropological assessment, and DNA-based approaches including mitochondrial DNA and forensic genetic genealogy.

Key Topics Include:

- Investigative Databases and Resources
- Identification Methods, including Fingerprinting Approaches/Limitations and DNA-Based Identification Methods
- Case Examples demonstrating Various Identification Methods
