

Don't Let Water Damage Your Home

Beyond Telemetry® Home Automation Services

Remotely monitor your home, vacation home or Airbnb with wireless water sensors.

Actively monitor room temperature, humidity and possible flooding from any location in the world. Receive text alerts when room temperatures peak or flooding starts, after just a few drops of water.

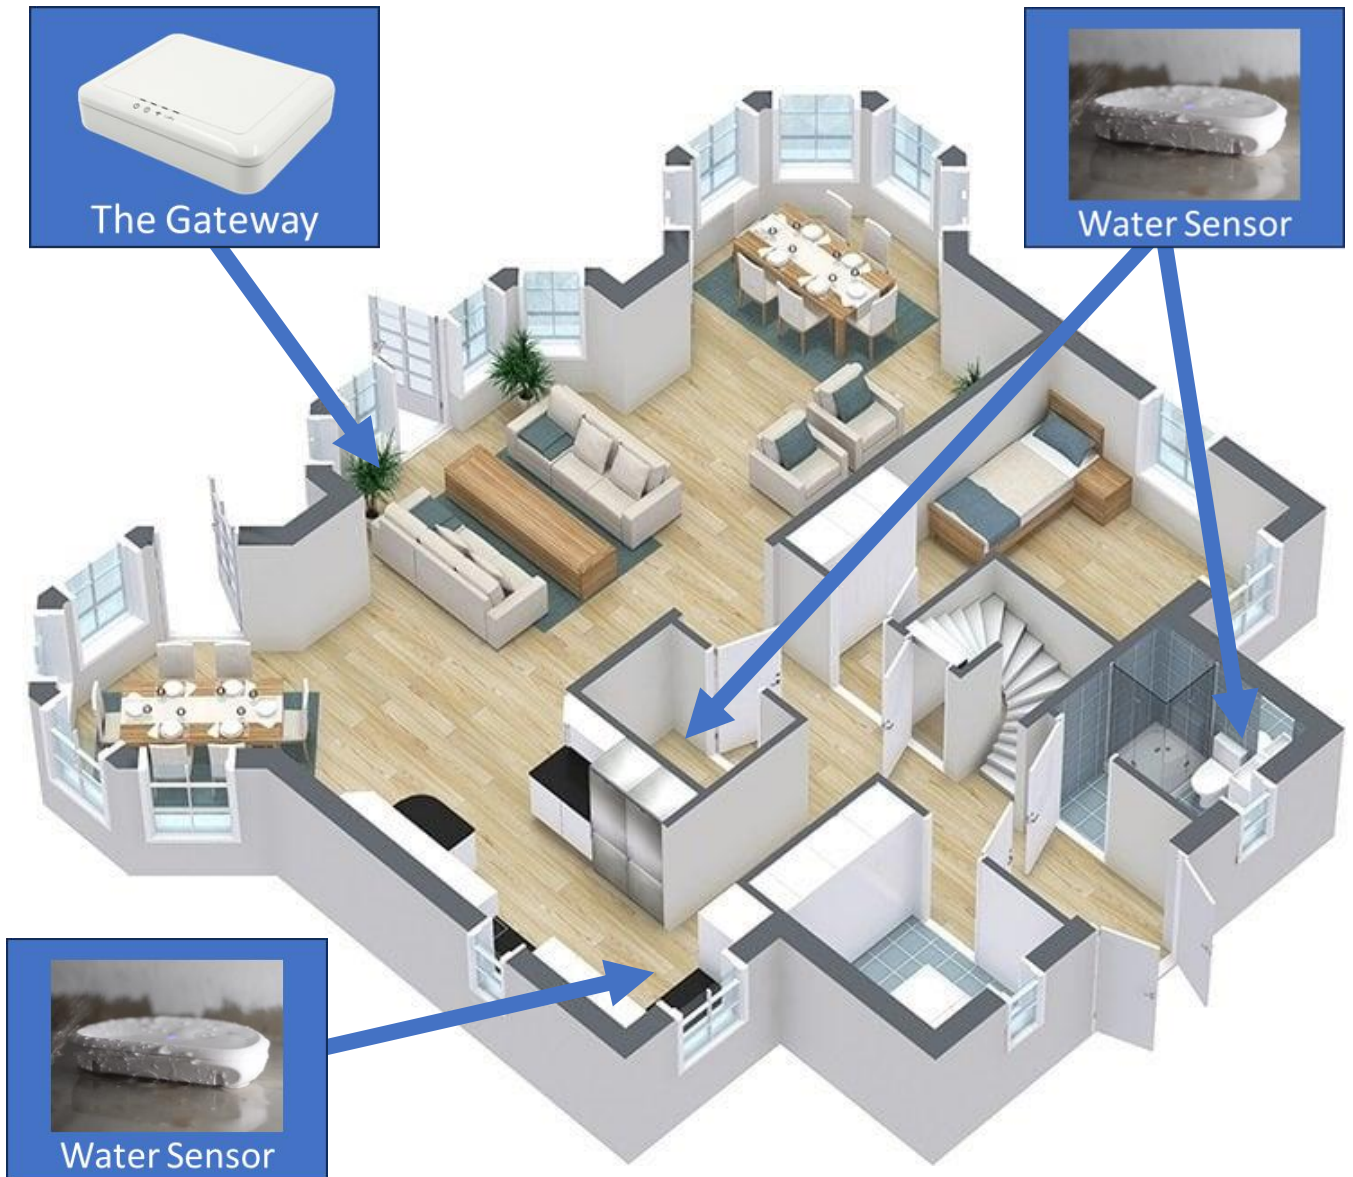

Protecting your investment will increase your bottom line and reduce insurance costs.

Receive alerts from your kitchen, bathrooms, laundry room and garage.

System Overview

Water sensors report wirelessly to the gateway and then on to your cell phone. Water sensors will operate for several years on the same battery.

Monitor your entire home for just pennies per hour. Call us today so we can get started on your personalized home system.
