

# STOP LOSING REFRIGERANT AND PROFITS

## SMART REFRIGERANT LEAK DETECTION FOR GROCERY STORES

**BATTERY OPERATED**

**IMMEDIATE ALERTS**

**CLOUD DASHBOARD**

**FAST, NON-INVASIVE  
INSTALLATION**

## Early Detection - Saves Thousands

### Beyond Telemetry Refrigerant Leak Detection

Grocery stores lose hundreds of pounds of refrigerant yearly, costing thousands in losses, fines, and spoilage.

### The Solution:

#### Automated Yeti Leak Detection Sensors

- Wireless, real-time monitoring to catch leaks early, before they become disasters.

#### Key Features:

- Detects leaks in R-404A, R-407A/F, R-449A, R-454A/C & more
- Instant Alerts – Get notified via app or email
- Cloud Dashboard – Simple access to system data, no IT needed
- Fast, Wireless Setup – Installs in minutes, no wiring or downtime
- Turnkey installation and training

#### Why It Pays Off:

- Cut Refrigerant Losses by 80%+ – Save up to 2,000 lbs./year in large systems
- Protect Food Quality – Prevent cooling failures and spoilage
- Avoid Fines & Downtime – Stay EPA compliant
- Extend Equipment Life – Prevent damage from low-charge operation
- Reduce Repair Costs

#### Compatible With:

R-404A, R-407A/F, R-449A, R-448A, R-454A/C, HFCs, A2Ls & natural refrigerants

# The Importance of Detecting A2L Refrigerant Leaks

With the phaseout of high-GWP (Global Warming Potential) refrigerants, many grocery stores are transitioning to **A2L refrigerants**, such as R-454A and R-32.

These gases are more environmentally friendly but are **mildly flammable**, requiring **early leak detection** to prevent safety hazards and maintain compliance with ASHRAE and EPA regulations.

- **Early Detection Saves Money:** Even a **small leak** can cause your refrigeration system to work harder, leading to **higher energy costs** and potential equipment failure.

- **Protect Food Safety & Reduce Waste:** Refrigeration failures due to leaks can **spoil thousands of dollars** in perishable goods, damaging your store's reputation.

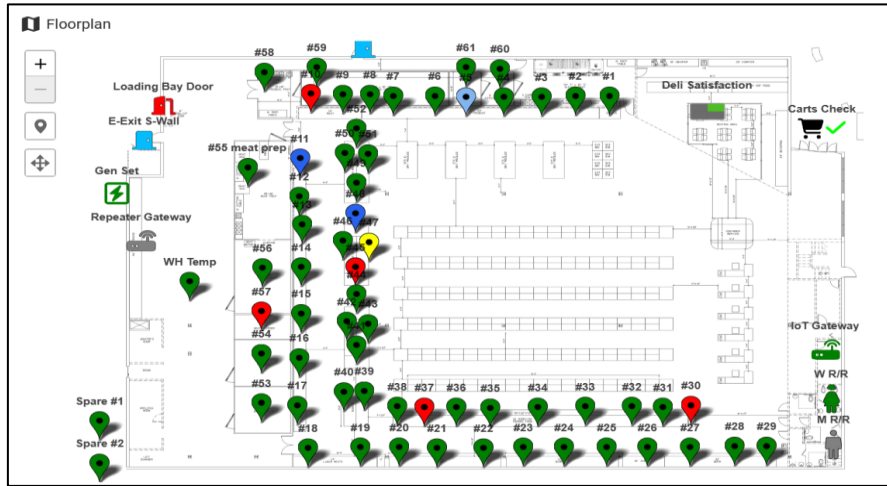

- **Ensure Employee & Customer Safety:** A2L gases, while low-risk, require **proper ventilation** and monitoring to **prevent excessive accumulation** in confined spaces.

- **Regulatory Compliance & Sustainability:** Leak detection systems help **meet EPA Section 608 compliance**, avoid fines, and support your store's **sustainability goals** by reducing refrigerant emissions.

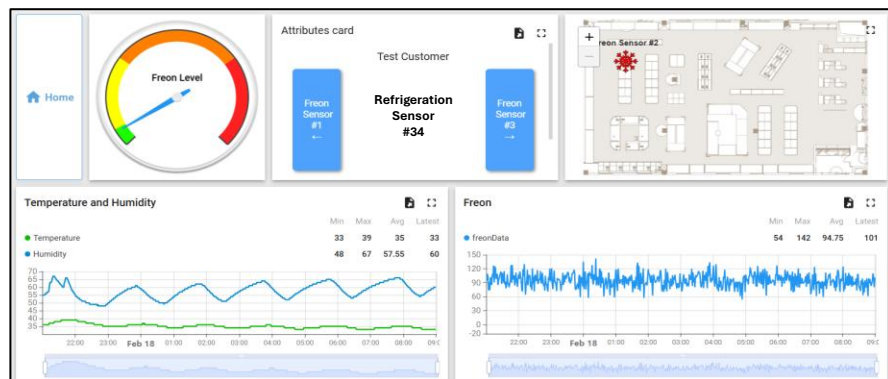

## Don't Wait for a Costly Breakdown Take Control Today!

A refrigeration leak detection system is a **simple, proactive step** to prevent losses, optimize efficiency, and ensure safety.

**Stay ahead of leaks before they become disasters!**

## Automated Sensor Dashboard Displays All Sensors In Each Store

## Automated Data Reported From Each Sensor

## Yeti Refrigerant Leak Detection (A2L Wireless Sensors)
