

Dypro Multi-Purpose Dye: DYEING BUTTONS AND OTHER PLASTIC ITEMS

Before you start:

- Since this is non-standard usage colour results may not be the same as that achieved on fabrics
- We suggest small samples should be tested before treating large quantities
- Colour rules apply, e.g. Yellow + Blue = Green

Method

1. Dissolve 5g of dye in 500ml / 1 pint of boiling water. DO NOT ADD SALT.
2. Add solution to rustproof, heatproof vessel. Place items in dye, ensuring that they are submerged in the dye solution.
3. Bring to simmer. Maintain ten minutes, or until desired colour is obtained.
4. Remove items, rinse thoroughly until water runs clear.

Note: Fresh dye solution should be used for each batch.
