Spring Cleanup - Includes cleanup and removal of all leaves, sticks, sand and salt from the entire property. Raking all the beds and removing this debris as well. Thatching the grass areas is also included in this clean-up, and the removal of this debris as well. All plow damage to be loamed and seeded during cleanup

Mulching – Consists of the edging of all beds in grass areas and mulching all existing beds on the entire property. Mulch type to be Dark Brown. (Delivery of Mulch to be dumped on property)

Weekly Maintenance – Includes mowing of the grass, profiling of all walks as well as the trimming and blowing of all walks and parking areas. May 1st – November 1st.

Weeding – A pre-emergent will be used prior to mulching. Weeding will be performed during the pruning and as needed.

Fall Cleanup – there will be two cleanups, the initial and the final, during each time all leaves will be removed from the property. The final clean-up will also include a final mow and raking of the mulch beds.

Aeration - includes aeration of all the grass areas on entire property this will be performed once in the spring and once in the fall and over seeding in the Fall.

Pruning – to trim and prune all existing bushes along foundations, and in bed areas in the property, removal of all debris, this is to be performed in mid to late summer.

Fertilization Program – includes 5 applications of fertilization + grub Control

1. Pre- Emergent crab grass preventer – early spring
2. Pre- Emergent crab grass preventer & Grub control– mid spring
3. Weed and feed – late spring
4. Straight fert. – September
5. Winterize – October – with Lime application

Retention area Mowing

1. Once a year mow retention pond area, no cleanup of this area just cutting.
