

SteadyPure™

EF116 HWS. 29"H x 40"W x 9"D.

- Whole house system provides Premium Quality Water from every faucet and throughout your entire home for Drinking, Cooking, Coffee, Ice Cubes, Showering, Laundry, etc. Reduces Chlorine and Chemicals that can give water an off taste, be breathed in, dry your skin and damage/discolor your hair. Reduces Dirt, Rust, Cysts, Algae and Fibers from degrading distribution piping. Leaves in Minerals and Fluoride.
- Scale Stabilizer™ reduces Scale buildup on faucets, showerheads, ice makers, dishwashers, and hot water heaters. Reduces stains caused by the water corroding your pipes and leaching metals. Helps your hair become more manageable and relieves dry skin! Water-using appliances and plumbing fixtures work more efficiently and last longer. Helps your clothes stay brighter longer and reduces the amount of laundry, cleaning and skin care products used.
- Savings can average about \$1,500 per year for a family of four!

SteadyPure™

RO251 DWS. Reverse Osmosis.

- Provides Ultimate Quality Water from a separate filtered-water faucet at your kitchen sink (Not included). If you are on a private well or have concerns the RO251 addresses, the advantages are numerous.
- The RO251 reduces Arsenic-5, Lead, Fluoride, Chlorine, Chemicals, Nitrates and more contaminants than you can even think of. It is decisively finer in filtration than most filter systems and is still less expensive and a lot more convenient than bottled water. Savings can be \$600 — \$700 per year for a family of 4!

SteadyPure™

A great tasting alternative to bottled water!

A vital compliment to a refrigerator with a water dispenser!

Maintain the bottled-water quality you're accustomed to. Now conveniently available at your kitchen sink and at a much lower cost.

Do you use bottled water or the water from your refrigerator for Cooking, Coffee, Rinsing Vegetables, etc.? Most people do not. Why consume contaminants with the food you cook, bake and rinse? Reduce the Chemicals, Lead, Dirt, Rust and Fibers that boiling leaves in and get absorbed into your food. Enjoy better tasting Coffee, Pasta, Vegetables, and more!

Most *SteadyPure*™ systems leave in Minerals and Fluoride and incorporate a Scale Stabilizer™ to reduce Scale buildup on ice makers, coffee makers, and more. Filter the water direct to your main faucet, a separate dedicated faucet, a hot water dispenser...

Or... Experience great tasting water from every faucet in your home while also protecting your appliances, plumbing fixtures, hair and skin with our whole house systems. Savings for your family can be substantial!

SteadyPure™

UC202 DWS.

- Provides Premium Quality Water directly from your kitchen faucet. If you prefer a minimalist look with fewer fixtures at your sink, the UC202 is the choice because it does not require a separate faucet.
- Reduces Chlorine that can give the water an off taste. Reduces Lead, Chemicals, Dirt, Rust, Cysts, Parasites, and Fibers from degrading distribution piping. Leaves in Minerals and Fluoride.
- Scale Stabilizer™ reduces Scale buildup on coffee makers, ice makers, etc. Helps your water-using appliances that chill or heat water work more efficiently and last longer, saving you time and money.
- Features a combination of technologies to offer fine filtration, long life and high flow rate. Savings can be \$600 — \$700 per year for a family of 4!

SteadyPure™

IC207 DWS.

- Provides Premium Quality Water from a separate filtered-water faucet at your kitchen sink (Not included). Please view our Drinking Water Faucets and Hot Water Dispensers at www.steadypure.com.
- The IC207 and UC202 perform equally well in reducing contaminants. They both have an annual cartridge change, can be installed in the basement, and can be interconnected to your ice maker with an optional splitter tee.
- The difference is primarily flow rate and the appearance at your sink. The UC202 flows at 1.75 gpm through your kitchen faucet and the IC207 flows at 1.0 gpm through a separate filtered-water faucet. As a reference, the new water-saving kitchen faucets have flow rates from 1.5-1.8 gpm.
- Savings can be \$600 — \$700 per year for a family of 4!
