

Live Data, Anywhere

- ✓ Monitor all your bins and sites from any internet connected device.
- ✓ Intuitive, feature rich user dashboard.

Intelligent Fan Control

- ✓ EMC-based automation ensures your fans only run when conditions are ideal—no wasted energy, no guesswork.
- ✓ Drying, Cooling, and Conditioning.
- ✓ True digital overload protection.

Grain Temps, Hotspot Detection, and Alerts

- ✓ Grain temperatures are monitored 24/7.
- ✓ Alerts are sent by text or email when a hotspot goes over your set threshold.
- ✓ Temperature data supports automatic cooling decisions.

dozen Commodities

track Conditions

Combined 30 Years
of satisfaction with
Grainsight!

Hear it from **GRAINSIGHT™**
users themselves:

We installed the Grainsight system in 2014. The system has performed as promoted. The Web-based interface allows us to check on our grain from anywhere on our phones and laptops. Alerts are sent via email or text if there's a problem with a fan, grain in a bin reaches a set temperature or if the grain's temperature runs too high. The people at Grainsight are very capable and have provided great service since we purchased the system. We are very satisfied with the product.

-Alan Qual
Lisbon, ND

I use the Grainsight system to dry and condition my corn, wheat, barley and soybeans and couldn't be happier with the results. Not only does the system save me time and money but I find that my crops come out of the bin in perfect condition as well. The on-line interface is easy to learn and use. Plus, I really like that I can check on my bins from anywhere using my phone.

The Grainsight system has become an essential part of our grain storage operation. We use it to condition our grain and add weight before bringing it to market. Before installing Grainsight, we were guessing about when to run our fans. Now we're confident they're running at the best times automatically. The results have been great.
