

MOBILE SEDATION SERVICES

Dental Sedation Solutions

About Us

Dental Sedation Solutions provides expert and comprehensive mobile IV sedation across the North West, supporting dental teams in caring for anxious, phobic, and medically complex patients. Trusted by over 75 practices, our experienced team enables you to offer safe, effective sedation with a range of techniques within your own practice, reducing waiting times and avoiding the need for external referrals.

Once your practice is set up with our service, we supply everything required to get started – including consent forms, patient information, and clear guidance on compliance requirements – ensuring a seamless, fully supported experience for both your team and your patients.

Why Dental Sedation Solutions?

- ✓ Offer advanced services in house
- ✓ Improved patient comfort and experience
- ✓ Continuity of care - avoid external referrals
- ✓ Attract new patients with increased options
- ✓ Higher acceptance of complex treatment plans
- ✓ Reduced cancellations and no shows
- ✓ On-site access to Specialist clinicians
- ✓ Seamless integration with your team
- ✓ No additional overheads, all equipment provided

PROFESSIONAL TESTIMONIAL

"I've been using **Dental Sedation Solutions** for the last two years and I've found Shilpa and her team provide a **professional** and **reliable** service for my patients ranging from **simple sedation** for those who are anxious of dental treatment to **advanced sedation** for those undergoing complex dental implant surgery. **Highly recommended.**"

IV Sedation

Simple IV sedation helps patients to relax during treatment, ideal for those with dental anxiety, strong gag reflexes, or difficulty with local anaesthetic. Suitable for all routine procedures incl fillings, extractions, and hygiene.

Anaesthetic-Led Sedation

Our team of highly trained Specialist anaesthetists offer a deeper level of sedation for lengthy procedures, complex treatment plans or for those with extreme dental anxiety or complex medical needs

Smooth Implant Placements

Target Controlled Infusion (TCI) techniques help to maintain consistent levels of sedation for several hours keeping patients calm and relaxed throughout procedures allowing for smooth and precise implant placements

Highly-Experienced Team

Our experienced team uses advanced monitoring equipment such as capnography for simple and advanced IV sedation, to ensure compliance to regulatory standards and the highest level of patient safety and care.
