

# SPECIAL CARE DENTISTRY

**Tailored Dental Care for those with additional needs:  
Disabilities, Mental Health and Medical Conditions**  
Provided by Dental Sedation Solutions at Victoria Clinic, Manchester

## Comprehensive Special Care

We provide compassionate, patient centred dental care for adults and teenagers who require extra support, ensuring a safe, respectful, and individually tailored experience.

We regularly support patients who are:

- Neurodivergent, including Autism, ADHD, and Sensory Processing Differences
- Living with Learning or Physical Disabilities
- Experiencing High Anxiety or Dental Phobia
- Medically Complex

We are equipped to provide routine dental treatment, from check-ups to restorative care for those who can be treated in primary care. We maintain strong links and have access to other specialist services should a patient require a multi disciplinary approach.

- ✓ Consultant-led Sedation and experienced team

"A big thank you to **Dr Shilpa** and **Dr Roberts** for carrying out a **life changing** restorative dental treatment, under sedation, for my son who has learning disabilities. You are providing an **excellent** and **unique service at competitive prices**. Thank you both for all your **help and support**."

### PATIENT TESTIMONIAL

#### Advanced Sedation

Provided by Dr Justin Roberts (Consultant Anaesthetist), a combination of sedatives used to deliver moderate sedation for complex treatments. It allows for safe, effective sedation for longer visits

#### Inhalation Sedation

Provided by Dr Shilpa Shah (Dentist), this is a gentle, quick-acting method. It helps mildly anxious adults and children feel calm, improving cooperation and allowing for a quick recovery

#### Intranasal Sedation

A sedative is sprayed into the nose, making the patient relaxed during treatment. It is a key technique for those with Learning Disabilities, Autism, or Severe Needle Phobia who struggle to accept cannulation whilst alert

#### Oral Sedation

This involves having a sedative drink in the surgery to feel relaxed. It is useful for individuals who cannot tolerate injections whilst awake or those who commonly experience fainting at the thought of a needle

# Compassionate Dentistry for Every Patient

## Meet The Team

Behind Special Care Dentistry

**Dr Shilpa Shah**  
(**Director, Dentist and Dental Sedationist**)

Dr Shah has extensive experience across hospital settings in Oral Surgery, Special Care Dentistry, and Paediatric Dentistry. Dr Shah is a respected national lecturer and accredited mentor in sedation, and Vice Chair of the Association of Dental Anaesthetists and Sedationists. She is passionate about improving access to high-quality dentistry for anxious adults and children, providing a broad range of treatments in a calm and relaxing manner, often in conjunction with sedation.

**Dr Justin Roberts**  
(**Consultant Anaesthetist & Autism Lead**)

Dr Roberts is a Consultant in Anaesthesia and Critical Care Medicine, on the GMC specialist register for both fields. He spends half his time providing specialized sedation and anaesthesia, with a particular passion for supporting patients with learning disabilities and autism. Dr. Roberts is the Autism Lead in his NHS role, ensuring your patient receives the highest quality and most equitable care possible, and he oversees all cases requiring advanced sedation at our clinic.
