DRi-Z All Weather Shade Fabric

1/ DRi-Z All Weather Shade Fabric.

DRi-Z All Weather Shade Fabric is a high quality, imported shade fabric distributed in Australia and New Zealand by Rainbow Shade Products who have operated in the industry for over twenty years. The fabric consists of a high density polyethylene knitted shade fabric, with a low density polyethylene coating. All the materials used are of the highest quality and are treated to provide UV-R protection and longevity.

****Independently tested to Australian Standard 4174-1994.***

2/ DRi-Z and Environmental Factors.

The lifespan of DRi-Z All Weather Shade Fabric is estimated at 5 years. However this is dependent on a number of factors which include, quality of workmanship, design and installation, as well as a range of environmental factors. In addition the effects of dust, moisture, pollution, wind and rain, wildlife (including birds), falling leaves or debris and biological growth. The environment and immediate surroundings can impact on the lifespan of DRi-Z All Weather Shade Fabric. It is reasonable for customers to expect a shorter lifespan from DRi-Z All Weather Shade Fabric if one or more of the factors listed above are present.

It is important to note that the coating is highly sensitive and can be damaged by wildlife and falling debris. Care must be taken to protect the integrity of this layer.

Supplier recommended maintenance schedule

maintenance	conducted by	frequency	at the cost of...	Importance
Annual inspection	Shade sail professional	Recommended once a year	*Owner/ by arrangement with shade sail professional	This will give you a report on the condition of the shade sail and highlight any small issues before they become big problems. * Note first inspection may be offered free of charge by your shade sail professional. Check with them for the details of what they offer.
Re-tension	Shade sail professional	As required	Owner	Shade Sails which are loose are more prone to damage. Without optimum tension on your shade sails damage can occur to the fabric and support structure. Rectify immediately if this occurs.
Re-stitching	Shade sail professional	As required	Owner	Over the years the stitching can give way due to being broken down by the sun.
Cleaning	Owner or commercial cleaner	Recommended each 6-12 months or as required	Owner	The cleaning of the DRI-Z All Weather Shade Fabric ensures all environmental residues are removed to increase the life of the fabric, while reducing the likelihood of stains or growth (such as mould) on the fabric.
Re-sealing	Shade sail professional	As required	Owner	Be aware that your shade sail during its lifetime may require the re-application of the water proof sealant which was used on the sail when it was first made.

Supplier recommended cleaning method and instructions

The Best Cleaning Method For Most Shade Sails.

Using Sugar soap and a soft bristle brush.

Work the soap into the fabric and leave for 15-20 minutes and then rinse the sail.

NOTE: Brush must have soft bristles and must not be applied to fabric in such a way as to damage the fabric or the coating of the shade fabric in any way.

If using a high pressure hose, a rotating brush head attachment must be used.

Do not spray the fabric directly with a high pressure hose as this can permanently damage the fabric and the coating.

For Shade Sails With Hard To Move Dirt And Grime.

Where a commercial grade cleaning product is required for hard to move grime, we would suggest a product known as Wet & Forget.

More product information, pricing and instructions can be obtained by calling 1800 222 302 or online at www.wetandforget.com.au (In NZ Wet & Forget is available from major hardware stores.)

The cleaning procedure is as follows.

Always use a soft brush or sponge to prevent damage to the fabric and the coating. Use the table below to determine the product concentration and water dilution levels.

Dirt	Concentration	Product
Minor	15%	Liquid Sugar Soap
Medium	30%	Liquid Sugar Soap
Major	25%	Wet & Forget

Conclusion

Rainbow Shade does not recommend shade sails be cleaned with bleach or mould removal products. Acid washing or the use of a high pressure hose will damage the fabric and the coating. The use of any processes, other than the ones recommended here may void the warranty and will greatly reduce the lifespan of the shade fabric. Should the above two cleaning methods prove to be unsuccessful we suggest that the shade sail be taken down and cleaned by a shade sail cleaning professional.

Understanding Warranty

A shade sail is generally covered by two types of warranty. Details of both are listed here below.

a) Fabric Suppliers Warranty

The DRi-Z All Weather Shade Fabric warranty covers customers where the fabric has degraded due to exposure to sunlight. Rainbow Shade Products offer a 5 year limited warranty which is structured on a pro-rata basis.

Rainbow Shade Products limited warranty does not extend to the following instances:

- damage to the fabric caused by abrasion or mechanical means.
- damage which may occur due to faulty design or installation (tears, wear, friction damage, holes.)
- colour fading.
- external chemical damage by the use of damaging chemical cleaning agents and chemical products.

For full terms and conditions please contact your shade sail professional for a copy of the warranty.

Should you feel that your shade fabric has been adversely affected by damage from the sun (UV Degradation) then you should contact your shade professional to assess the situation for you.

Please Note: Without exception the DRiZ all weather membrane must be installed facing downwards to protect the membrane. Any installation not conforming to this will void the warranty and no claim will be entertained

Understanding Warranty Continued

b) Shade Professionals Workmanship Warranty.

Details of the shade workmanship warranty are offered to you by the company which manufactured and installed your shade sail. What is offered in a workmanship warranty can vary from company to company so it is recommended that you obtain the details from your shade professional.

DRiZ All Weather Shade Fabric is ideal for shade sails, shade structures, commercial car parks, playgrounds, outdoor entertaining areas and a variety of commercial and residential applications.
