

Native to the eastern states of Australia NOT Western Australia - classed as a PEST

Bing Bing - 4th August 2024

War-in (pronounced *whirrin*) - indigenous name for the **Rainbow Lorikeet** - the sound their wings make when they take off in a flock - they are seen and revered as a symbol of hope - like any rainbow that appears in our skies.

Bing Bing - approximately 4-5 months of age -
undetermined sex

Came into care: Monday 8th of July, 2024

Bing Bing - Ready Now for a new forever home.

Bing Bing - 4th August 2024

Bing Bing was approximately

3 months old when brought to me. When Bing Bing first came to me that sweet beak was mainly black with a slight red/orange edge, it is now colouring to the beautiful red/orange of an adult & will continue to deepen & brighten in colour. Bing Bing was a wild young war-in who was brought to me with a very badly damaged left foot, missing back feathers & a lot of bruising after being dropped from a great height by a Raven. I have not physically interacted as much with Bing Bing as I do with all the babies. Bing Bing needed his little foot, severe trauma and the bruising to heal completely, me wanting to tame him right down would **NOT** have been kind. He responds to his name, my little girl named him because he made a sound like 'bing', he has started to eat out of my hand and I usually wet my hands with water before I interact with him and he knows my voice.

Bing Bing is a very curious war-in (as they all are) Bing Bing also needed to attach to his 'new' family' so I have held back a lot on the physical with Bing Bing. Bing Bing was extremely traumatised by his great height drop adventure, I will not add to trauma by physically handling the older war-in unless I need to, this is now in the hands of you, his new family, to enjoy & learn along with Bing Bing. Bing Bing's severe trauma, that very badly damaged right foot injuries & the bruising have healed completely. Bing Bing is a very curious war-in (as they all are) Bing Bing LOVES his bell toy & his bright pink bell ball. I am teaching Bing Bing to drink from the water dispensers. Bing Bing happily eats all fresh room temp fruits and veggies but Bing Bing's favourite is slices of fresh corn on the cob. Bing Bing likes to take their time to drink their wet mix. Bing Bing will make a beautiful, loving and gentle new addition to a caring gentle family. I only call Bing Bing '**he**' as Bing Bing is very laid back & gentle. **Sexing can not be easily or definitely determined unless by a qualified avian vet.** Bing Bing now needs to attach to their 'new' family'. Bing Bing was extremely traumatised by all the damage caused by the Raven that attacked & then dropped young Bing Bing. Bing Bing has been raised around a very curious greyhound, 3 indifferent cats, a hands on 7 year old and is used to all the normal house noises, vacuum, radio, blower etc & is ready now to go to their new forever home with their cage, name plate, print out of Bing Bing's history with photos, a week's supply of wet mix and crunchy balls & favourite toys.

Arrange to come & meet Bing Bing & the other sweet war-in currently being hand raised & cared for.

War-In Rainbow Lorikeet Rescue, Care and Rehoming - Leda WA

MUST HOLD AND PRODUCE A CURRENT WA BIRD LICENCE.

The Rainbow Lorikeet's tongue is like a bristle brush. Unlike many other parrots, they **DO NOT** eat seeds or commercial seed products - they are nectar - pollen eaters.
