

Michael Cearley

American Brothers

has learned about the science behind 3M Roofing Technologies.

3M™ Smog-Reducing Granules. Shingles with smog-reducing technology reduce smog gases from the air with the same effect as trees. That's 2-3 trees of smog-fighting power on your roof.

3M™ Cool Granules. 3M cooling technology makes asphalt shingles cool roofs by reflecting sunlight and heat back into the atmosphere. Installing cool roofs can help reduce the effects of urban heating and help keep homes more comfortable in climates with year-round cooling needs.

Scotchgard™ Protector. Protect against unsightly black streaks caused by algae for the life of the roof. Shingles with Scotchgard™ Protector are also a Holmes Approved Product.
