Guess & Co. Corporation ™

Introducing Guess & Co. CloudPoint™ Solutions

Guess & Co.'s CloudPoint Solution is a full-grade data center in a smaller form factor designed to support your local, remote and edge computing requirements.

A Real Data Center, Just Smaller Form

- Twelve full-sized server cabinets
- Mechanical/electrical characteristics match or exceed full-size datacenters
- Power – 100kW @ 2N; 200kW @ N
- Fully redundant mechanical & electrical systems
- Hardened & reinforced concrete shell built to withstand harsh environments

Benefits

01 A true data center in a smaller form factor for local, remote and edge applications

02 Data center grade protection for critical IT assets

03 Secure lights-out operation

04 Flexible acquisition options

05 Includes program and project management

CloudPoint @ Scale

Guess & Co. Corporation handles everything from site selection to procurement to placement of **CloudPoint** units at each site to carrier and application partner integration. **CloudPoint** supports the multi-location requirements that support the **CloudPoint@Scale**.

CloudPoint is designed for remote, secure, lights-out operations with remote monitoring and control functionality provided by Guess & Co.'s software. Our software includes an exposed REST API for integration into existing NOC and datacenter operations tools. It is customizable and extensible.

Guess & Co. provides full monitoring and control of electrical, mechanical, and environmental systems. We monitor more than twelve hundred data points. Our software supports the remote operation of key components (e.g. access doors, circuit breakers, cameras, and more).
