## Kool Kreepers Color Tracer

(Hover over image to zoom in)

[Description](#) [Videos](#) [Reviews](#)

### Learn & Play with this Color Changing Chameleon

Have fun while learning with this smart chameleon. A simple and engaging introduction to STEAM learning, your little one will further develop their color recognition while enhancing their critical thinking and problem-solving skills.

Draw a line on 1 of the multi-colored play sheets, and watch the chameleon follow the path and change colors to reflect the hue it's on. This little robot can change 5 different color: blue, green, yellow, pink and purple.

Watch as your child tries more and more complicated paths for the robot to follow. Even play with other multi-colored surfaces to see how your little one's chameleon friend reacts.

Measures 4.75" x 2.25" x 2.5". Includes chameleon, dry erase marker, 2 colored play sheets and USB power cord. For ages 3+.

Item #3157732

## Floating Ball Game

(Hover over image to zoom in)

[Description](#) [Reviews](#)

### Floating Ball Game - Demonstrates Bernoulli's Principle - Law of Pressure Differential

Another classic science toy that is not only fun but teaches real scientific concepts. Made of wood. Comes with two styrofoam balls. See how long you can make the ball float. Challenge family and friends. Great party favor or holiday gift.

The floating ball game is an excellent example of "Bernoulli's Principle". As air is forced around the ball it must move faster in order to "catch up" on the other side. The result is a decrease in air pressure around the ball that in turn keeps the ball in place. The force is strong enough to resist other forces acting on the ball such as a subtle tap from your finger. The force can also overcome gravity if the flow of air is strong enough. This can be demonstrated by turning the base of the pipe 15-20 degrees - the ball will remain suspended in the airflow even though it is not directly above it.

Give it a try and see what you can discover!

**Warning: Choking Hazard -Small Parts. Not for children under 3 years. /!\**  
**Warning: Choking Hazard -This toy is a small ball. Not for children under 3**

Item #3037783

**\$3.95**

[Description](#) [Reviews](#)

## Learn Science Concepts While Crafting

Bring science and art together in this fun kit to keep children engaged and learning. Utilizing 10 arts and crafts projects, your child will be able to explore science, math and engineering concepts in a way that's fun and easy to understand. They'll be too busy having fun that they won't even realize that they're learning.

Using fully illustrated, colorful experiment cards, kids will be complete engaged as they play. In their crafts, they'll be able to connect gears and learn about the cycles of time, color tessellations, safely connect circuits and light up sculpted dough, make gliders and more!

This deluxe kit is the perfect enrichment for young kids at home! They'll learn every step of the way while enhancing their creativity and imagination. It's a truly all-encompassing activity kit for young minds.

For ages 4+.
