Call-In Dictation Systems

You can purchase or lease our DigiTel Call-In Dictation System when you want a system that is <u>running on your pc and connected to your phone line(s).</u>

1. Simply connect our DigiTel Pod to your pc's USB Port and to your analog phone line(s), install the DigiTel Software, and choose a PIN for each user.

2. DigiTel's dictation files go to our DigiScribe transcription software on the same pc, or across your network, or to our FTPMagic utility to send your dictation files to your transcriptionist's pc at home or in another building using our secure and inexpensive FTP Folder rental service (just 33$^{\textcent}$/day).

3. To dictate, call the phone number connected to your DigiTel, log-in with your PIN, and control your session using your phone's touch-tones.

4. DigiTel supports 1 to 32 users calling in at once. Purchase the line capacity you need today, with the flexibility to add more line capacity tomorrow.

5. The DigiAlert option can alert your transcriptionist to new work, and the ReportGenie option can create custom dictation history reports for you.

"DigiTel is the perfect efficiency tool to help create reports in police and sheriff departments, law firms, medical institutions, insurance companies and schools."
