Remarks: • indicates presence of this configuration - indicates absence of this configuration - ∘ indicates optional configuration 1. The charging time is the theoretical charging time of the vehicle, and the actual usage process is affected by the charging power and environmental temperature. The specific charging time depends on the charging conditions;

- 2. The comprehensive driving range was measured according to the experimental methods specified in national standards, and the actual mileage may differ from this range due to the influence of driving conditions;
- 3. The actual acceleration time of vehicles varies due to objective factors such as different environmental temperatures, road conditions, driving habits, and operations during actual road driving;
- 4. The 210/508L value is the internal inspection report data of Leapmotor Automobile, for reference only;
- 5. The content of this directory is compiled based on the vehicle configuration status information at the time of writing. Due to some objective reasons, such as the continuous changes in laws and regulations, personal differences in understanding of relevant information, and the possibility of untimely updates in the introduction information, physical vehicles may have certain differences from the contents of the directory, and the actual sales vehicles of the store should be taken as the basis;
- 6. Leapmotor Motors has the right to interpret and reserve the right to change technical parameters, configurations, and other
