## You Are a Pin Prick Away from Knowing You Are Healthy & Can Go Back to a Safe Workplace

Firstly, **Entrical** is a recognized '**High Tech**' company and knows about the virus with our **Thermal Temperature Cameras**, which have been in operation since 2003. The SARS (Corona based virus) and Ebola have been and are methodically still being detected with reduced spread with our technology.

It samples everyone passing in front of the '**True Black-Body**' based technology highlighting the body temperature, records, documents, and points out those who are above the baseline for further investigation with real-time software.

**Entrical Eyes Facial Recognition** for airports, event centers, and corporations allows knowing their people and trends for the security of all. They also open all doors and speed gates '*touchless*,' when an authorized individual approaches.

It is the collection/dissemination of the data in real-time that is the key to all we do. Information/data sharing is just a portion of our global data sharing of information in law enforcement and corporate security.

Our clients want to know more about testing; they knew we could understand who was entering a facility but was there a way to be more proactive, knowing the health of the worker. That is where we started.

The **COVID-19 testing** is only nine weeks old; it has been a whirlwind period of due diligence, selectivity, and careful exploration, which we are involved directly within. So many scams, as usual, surface every single day. We watched, investigated, and chose our path to what fitted our mission and knew there was no point jumping in '*feet first*.'

The systematic investigation is our '**art form**' as *people's lives* are at stake; our in-depth actions have proven results, as you see.

Last week the tables were turned on us. Corporate America's investigators on behalf of their major front-page client's who want **COVID-19 testing**, so they can have a healthy workforce investigated and came directly to *Entrical*. Over a three day intense period of conference calls, sharing of data, and brutal questions, we continued into the late evening. It was like being interrogated by an alphabet-soup agency of the government, and we are not complaining.

The result was humbling and privilege to know that our '*exacting professional attention to detail*,' has enabled us to now be a significant role of bringing America and globally, healthy people '**Back to Work**.'

*Entrical* is a global distributor for testing, and all of our full services, are available for conference calls with corporations globally is there for you. Ask your questions; you will have the verbal answers and in writing. Time is pressing; time is what we do not have to kick start the economy!

The awful nasal swab **PCR tests** go directly to detect the presence of an antigen, rather than the presence of the body's immune response, or antibodies. By detecting viral RNA, which will be present in the body before antibodies form or symptoms of the disease are present, the tests can tell whether or not someone has the virus very early on.

PCR gives us a good indication of who is infected. It does not provide anything but a 'yes or no answer,' nothing, if you have the 'antibodies,' which is the essential criteria for going **Back to Work!**

### **What is serologic testing? (Finger Prick Blood Test)**

An **antibody test** tells us what proportion of the population has been infected. It says you, who has been affected, and are now immune to the virus." **It is a screening that takes minutes with the documented results in the individual's hands for verification!**

Historical studies have indicated that people who survived the 2003 sudden acute respiratory syndrome (SARS) outbreak had antibodies in their blood for years after recovery. Coronaviruses cause both SARS and Covid-19.

All that said, if public health officials can get a handle on what proportion of the population are theoretically immune to the virus, the information will help lift the social distancing restrictions on movement and return people '**Back to Work**,' which restarts the economy.

If there is a high enough level of people in the population who have immunity, they will then stop this virus from circulating within the community, which is known as herd immunity. If someone is infected, if the people around them have immunity, the infection won't be able to spread.

Unlike PCR tests, which commonly use swabs to detect Covid-19, blood samples are used for antibody tests, because there will be an exceedingly small amount of the coronavirus circulating in the blood compared to the respiratory tract, but a significant and measurable antibody presence.

This **COVID-19 test** is available for employers to blanket test their employees, knowing the status in minutes, recorded for their use in Human Resources, or if it is a state test, then for the state, to contact, trace and track. **Entrical** developed and is in use already in the Parishes and hospitals of Louisiana, with immense success.

**The more testing, the clearer the picture is on who is infected and thus who needs to be isolated.**

**For full details, please contact directly one of us and don't keep relying on hearsay or websites that promise the moon.**
