Bermuda – Watering & Mowing Guide

Warm-Season Lawn • Greensboro, NC

Watering

- Water deeply but infrequently: ~**1 inch/week** total.
- Encourage deep roots by watering **2–3 times/week** instead of daily.
- Reduce watering in cooler months—Bermuda slows growth when temps drop.

Mowing

- Keep Bermuda short: **1–2"** for lawns.
- Mow every 5–7 days during peak growth.
- Frequent mowing encourages density and a carpet-like surface.

Extra Tips

- Best in full sun; struggles in shade.
- Scalp (mow low) once in early spring to remove dormant growth.
