

Council Tool NY-Style Roof Hook

Council Tool/COUNCIL FIRE is proud to introduce a unique, American made, NY-Style Roof Hook design.

By building upon traditional fire tools, studying popular modifications, and using feedback from seasoned firefighters, we have taken the NY-Style Roof Hook to a new level.

The 6ft. Roof Hook has many standard design elements, which include:

- ~ Drop-forged high-Carbon steel hook-head and chisel-end.
- ~ 1 in. diameter DOM (Drawn Over Mandrel) steel tubing for strength and reduced weight.
- ~ No rubber or foam grips, so that it can be used straight out of the box, or customized by the end-user/firefighter.

Unique design elements include:

- ~ A slot forged into the lower hook, to allow the forks of a traditional Halligan to be married.
- ~ The tip of the upper hook comes to a point, so that it can be used to break tempered glass/auto-glass, or pierce roof decking to add safety and foot support, during roof work.
- ~ The chisel end and 1" diameter tubing will slide inside a standard fire ladder rung, allowing for additional safety and support while performing roof work, or allow turnout gear/equipment to be hung off the side of a ladder to keep it safe, up off the ground.
