

NEWS RELEASE

A periodic newsletter brought to you by Henry Marroum & Sons

VOL 1 Issue 2

17.02.2018

Dear Valued Customer,

We are pleased to release our second issue for the Marroum Newsletter. Every two to three weeks we will focus on a couple of topics that may benefit your laboratory, process control, or overall safety in the workplace. This week our main topics are as follows:

- Vötsch Technik the world's leading manufacturer for environmental simulation and climatic testing equipment. As part of their portfolio, Vötsch produces a wide range of instruments for Pharmaceutical Stability Testing.
- **MERCK** Emprove® program which focuses on Pharmaceutical Manufacturing and regulatory affairs that are related to registering excipients and active ingredients.
- How safe are you during a laboratory or industrial chemical spill? With **MERCK chemizorb®** you can rest assure your safety needs are met.

Stability Testing with Vötsch Technik

Vötsch Technik® supplies GMP-compatible and FDA-compliant solutions for the production and packaging of pharmaceuticals and active substances – from stability testing in the development phase, testing of the durability of packaging under tensile stress and sterile filling of packaging, right through to optimal, germ-free production under cleanroom conditions. Our safety workbenches and workplaces provide the necessary protection for both personnel and products. Be on the safe side!

VOL 1 Issue 2

17.02.2018

Accidental spills of hazardous liquids can happen in any lab. With Chemizorb® from Merck, you can remove harmful, aggressive or other unpleasant liquids quickly, safely, and eco-friendly.

Chemizorb® absorbents consist of porous mineral or synthetic copolymers that are chemically inert and capable of taking up huge amounts of liquid – 100 to 400 percent of their own weight, depending on the material. The Merck Chemizorb® product range includes “allrounders” as well as specific absorbents for different substances.
