

Here are the recommended steps for installing the niche.

- 1 Locate the desired position for the niche. Avoid exterior walls.
- 2 Measure the recess on the niche and mark the wall board at the desired height. Keeping the niche centered between joists.
- 3 Cut away backer board.
- 4 Add blocking to the opening as needed. Horizontal blocking for support and vertical as needed for fit.
- 5 2 methods to install the niche.

### **Mounting on tile.**

To start, install tile up to the recess opening. Allow full cure of adhesive on tile. Install the niche over the tile and into the recess. Use a premium, waterproof construction adhesive to bond to the framing, wall board, and tile surface. Loctite makes a great product. (See below)

Install the niche and brace until secure. 24 hours is full cure time for this adhesive. Once complete, seal edges with silicone caulk.

### **Mount niche to wallboard and frame.**

Cut away the backer board to accommodate the recess. Attach the niche to backer board and framing using a premium, waterproof construction adhesive. Install niche and allow to cure. Cut tile to frame of niche. Caulk with silicone adhesive once all has cured.
