

RALALA LAKES ASSOCIATION

MESSAGE FROM LINDA VAN STRAATEN RALALA ASSOCIATION PRESIDENT

The Summer of 2020. There are no words to describe my feelings about the time through which we are now living. We all have to find our own way through these challenging months ahead. Be safe, considerate of others and be well. Find peace through our connection with water, land and wildlife.

ICE OFF! SIGN SUMMER IS ON ITS WAY

As you know, Minnesota is the land of (over) 10,000 lakes. Camp Olson is proud to have lakefront on 5 of those and access to many more in the area for swimming, sailing, canoeing, kayaking, and fishing! This Spring, many lakes in the area are already or almost ice-free - which is almost a month earlier than the past couple of years. But, have you ever wondered what happens to those lakes when campers are not here in the Fall, Winter, and Spring? The DNR shares a great explanation of this cool process:

1. In the late fall, the lake loses heat to the atmosphere, and then on a day or night when the wind is not blowing, ice forms. The ice gets thicker as long as the lake can continue to lose heat.
2. In most Januaries and Februaries, snow both reflects sunlight and insulates the lake. With a thick snow layer, the lake neither gains nor loses heat. The bottom sediment is actually heating the lake water slightly over the winter, from stored summer heat.
3. Around March, as the air warms and the sun gets more intense, the snow melts, allowing light to penetrate the ice.

Continued on p.2

Ice going out on Lawrence Lake taken by Steve Beneke on April 10, 2020

ICE OFF! CONTINUED FROM P.1

Because the ice acts like the glass in a greenhouse, the water beneath it begins to warm, and the ice begins to melt FROM THE BOTTOM.

4. When the ice thickness erodes to between 4 and 12 inches, it transforms into long vertical crystals called "candles." These conduct light even better, so the ice starts to look black, because it is not reflecting much sunlight.

5. Warming continues because the light energy is being transferred to the water below the ice. Meltwater fills in between the crystals, which begin breaking apart. The surface appears grayish as the ice reflects a bit more light than before.

6. The wind comes up, and breaks the surface apart. The candles will often be blown to one side of the lake, making a tinkling sound as they knock against one another, and piling up on the shore. In hours, a sparkling blue lake, once again!

Information for this article is from a web blog posting by Ed Swain, then a research scientist at the Minnesota Pollution Control Agency and presently an Adjunct Professor at the University of Minnesota Department of Fisheries, Wildlife and Conservation Biology.

DNR LIAISON REPORT----- Rog Brekken

The RALALA liaison meeting with the DNR took place Jan 22, 2020 at the Brainerd DNR office at 9:30 am. The discussions are covered below by topic.

MEETING DATES:

The DNR staff said they prefer to meet after the first of the year. During spring, summer and fall the demands of field work and reports limit their time available for meetings. Because of the timing for this year's meeting,

both Marc Bacigalupi, Brainerd Regional Fisheries Supervisor, and Mike Knapp, Asst Supervisor were able to attend the meeting. This timing should be considered for future liaison meetings.

STOCKING UPDATE:

In the fall of 2019, 390 pounds of walleye fingerlings were stocked in Lake Roosevelt. This particular batch of fingerlings were 25 fish per pound. That translates to 9750 walleye fingerlings stocked last fall.

In the fall of 2020, 390 muskie fingerlings will be stocked in Roosevelt. These fingerlings are usually around 11 inches long.

In an article in the 4/15/20 issue, the Mpls Star Tribune reported that the DNR has ceased all 2020 spring egg taking operations due to the Covid 19 pandemic. This would likely have the most effect on the state wide walleye situation where the process produces 281 million baby walleye. Close contact can not be avoided in

the process of selecting wild stock, stripping eggs and milt and mixing, a closely choreographed operation. Since Lake Roosevelt was stocked last fall, there is probably little to no effect on it. Since muskie fingerlings are stocked, those fish are already "in process".

MUSKIE POPULATION AND CONDITION:

The muskie population was monitored in the spring of 2018 and the fish are meeting expectations for survival

and growth rates. Most fish in the survey were in the range of 31 to 44 inches. Muskies usually grow 3 to 4 inches per year until they get to 30 inches when their growth rate slows. All stocked muskies are tagged so any untagged muskie indicates natural reproduction. The DNR end game for muskies in Roosevelt is a population of 0.2–0.3 fish per surface acre and a self sustaining population.

FISH SURVEY:

The latest fish survey in 2018 on Lake Roosevelt show a steady decline in walleye from

CONTINUED FROM P.3

2000 to 2018 --- 2.63 fish down to 0.94 fish per gill net. At the same time a significant increase from 1.25 fish per gill net to 2.81 fish per gill net in northern pike is noted. I asked if the new increased northern pike limit on Lake Roosevelt was aimed at, and could affect, this situation. I did not get a clear answer to the question. They said that gill net surveys are imprecise and affected by the weather during the test. They feel that Roosevelt is a deep and steep sided lake and tends to be a "big fish" lake.

FISHING AID:

Marc demonstrated a fishing aid program/app on the computer called Navionics. It is free and shows the bottom topography of any Minnesota lake enabling the fisherman to see the underwater structure of the lake.

WATER QUALITY:

Key factors in water quality for the fishery are temperature, dissolved oxygen, pH-acidity and clarity. It is best if the water is slightly basic. If the water gets too acidic, it promotes algae growth. Some years South Roosevelt gets "pea soup" green with algae. Marc and Mike felt this could be a wa-

ter temperature phenomenon. Northern pike and bass prefer clear water whereas walleye do better in turbid water. Some people may remember that a number of years ago, Roosevelt was stocked with lake trout. However those trout need oxygen and 50 F water temperature. Those conditions changed and there was little to no oxygen where the water was 50 F and it became an unsustainable situation and trout stocking was stopped.

Another fish important for RALALA lakes are tullibee. They are an important food source for game fish and are also an "indicator species" for water quality. Tullibee also need cold water but are not as sensitive as lake trout. The fish survey results show that the tullibee population has held fairly steady in Lake Roosevelt and generally around or above the 75th percentile when compared to other similar lakes since year 2000.

AQUATIC INVASIVE SPECIES:

The Brainerd DNR is not overly concerned about Asian carp invading our lakes as there are too many barriers, dams and falls, for them to overcome in their migration. They cited at least five of these barriers

starting with St Anthony falls up to the Army corps dam on the Whitefish chain.

A study by the (MAISRC) Mn Aquatic Invasive Species Research Center (Mpls Trib 1/29/20) indicates that zebra mussels and spiny water flea inhibit the growth of young walleye. Marc and Mike say that first year growth by the little ones is very important for second year survival rate of the walleye fry. Zebra mussels feed on zoo plankton which is an important food source for young fish.

IMPORTANT NOTE: Marc showed a magnified picture of the mussel caught on a treble hook in Lawrence Lake last year. The DNR AIS specialist has confirmed that it is indeed a zebra mussel. Searching by the DNR in 2019 could not corroborate the finding. However Marc indicated that it is difficult to find

CONTINUED FROM P.4

veligers--young zebra mussels. He compared it to trying to find a needle in a hay stack. The DNR will do another dive search during 2020 in Lawrence Lake. However Marc said he would not be surprised to find zebra mussels in Lawrence and downstream into Roosevelt in the next five years.

The April 2020 newsletter of the Minn. Aquatic Invasive Species Research Center at the U of M reported some preliminary but interesting findings in the battle against zebra mussels. A joint study by the MAISRC and the USGS studied the effects of much lower copper concentration (60 parts per billion) than previous studies (1 part per million) on zebra mussels and the native lake ecosystem. The test took place in Lake Minnetonka with St Albans Bay treated and

Robinson Bay as a control. The preliminary data indicates that the low dose treatment reduced zebra mussel veliger density and live zebra mussel density. Finding the lowest effective dosage is important to reduce the treatment cost and minimize the impact on native species. Follow-up monitoring will take place in 2020 and 2021 to determine long term effectiveness.

LEAVITT LAKE FISH STOCKING:

If the RALALA survey of Leavitt Lake stakeholders warrants RALALA stocking Leavitt with walleye, the DNR recommends stocking at a level of one pound of fingerlings per littoral acre every other year. Leavitt lake is 122 acres with a maximum depth of 60 feet and a littoral area of 38 acres. The fingerlings would be in the range of 15-30 per pound and the cost would be in the area of \$20 per

pound. The DNR requests that the stocking be done in coordination with, and on the same cycle as the walleye stocking in Roosevelt. The advantage is that the DNR can observe and make sure we get what we pay for. Stocking at the same time also allows the DNR to coordinate future surveys and monitor growth. This would mean that RALALA can finalize plans in 2020 and be ready to stock Leavitt along with the Roosevelt stocking in 2021.

Minnesota Loon Watcher Survey Program

Photo and article by Sheila Langer

After a brief hiatus in 2019, the Loon Watcher survey is re-launching in 2020! Time was taken in 2019 to re-evaluate the program objectives, compile the data collected and revise the survey methodology in attempts to better capture insights into the health of our state's loon populations.

This year there are over 300 volunteers encompassing almost 400 Minnesota lakes. This incredible dataset has provided essential insights into Minnesota loon biology, behavior and population dynamics.

By volunteering, you will help the Minnesota DNR to better understand nesting success, productivity and interesting occurrences or problems that may negatively affect Minnesota's loons. I am currently monitoring Lake Roosevelt and the DNR reports that someone will be monitoring Smokey Hollow. A volunteer is still needed for Leavitt & Lawrence Lakes.

If you are interested in monitoring the state loon population via the **Minnesota Loon Watcher Survey Program**, contact **Andrew Herberg, Nongame Wildlife Specialist, Minnesota DNR** at **218-203-4371** or email **andrew.herberg@state.mn.us**

Hate Mosquitoes?

**We all do but....
Please be advised of the environmental concerns regarding hiring Mosquito Squad.**

The DNR has cautioned that they use broad spectrum pesticide that will kill all pol-
linators on contact. The MN Department of Agriculture doesn't allow it to be used within 10 feet of water, and, to prevent runoff, it should not be applied when rain is expected. It is highly toxic to aquatic life, humans and pets.

This information has been verified by Sheila Boldt, Crow Wing soil and Water and Chris Pence, Board Conservationist.

Beaver Damage on Crooked Creek

This year the beaver are exceptionally active on the south end of Lake Roosevelt. The DNR has given permission for landowners or their agents to pursue management of the beaver population. Refer to the article in the Northern Press of 6/2/2020 (www.northlandpress.com) or contact the DNR for further information.

WAKE BOATS AND THE MN LEGISLATURE

The Environmental bill currently in the legislature has been tabled because of the shortened session due to the Covid 19 threat.

The important issue for lake owners is the enhanced wake watercraft regulations bill. There are two different bills under consideration. One asks for a rule that would suggest high wake watercraft not come within 200 ft. of the shoreline. The weakness in this bill is the 200 ft. stipulation because there is no science to suggest that this is a good number of feet for prevention of shoreline damage.

By identifying 200 ft. at the state level it prohibits local ordinances from providing stricter rules by the lakes in a local area needing stronger protection.

For more on this, and information on a bill supporting research on more aspects of wake boat protection and safety see the MLR website: mnlakesanddrivers.org. (Jeff Forester)

CONTINUED FROM P.1

MESSAGE FROM LINDA VAN STRAATEN, RALALA ASSOCIATION PRESIDENT

As for RALALA, our special purpose is “protecting, preserving and improving the environmental condition of Roosevelt, Lawrence, Leavitt and Smokey Hollow Lakes, especially by:

- a) Protecting, preserving and improving the condition of the lakes and their watersheds to ensure the continued existence of a safe, enjoyable and sustainable natural resource for future generations.
- b) Engaging the adjacent and nearby communities through education and programs that advocate a healthy balance between recreational use of the lakes and protection of the lakes as a natural resource; and
- c) Promotion of the preservation, protection and improvement of Roosevelt, Lawrence, Leavitt, and Smokey Hollow Lakes through partnerships with both other local and regional organizations and those municipal, county and state policymakers with jurisdiction over these lakes and their watersheds.”

The RALALA board works hard to make the above statements a reality for all of you. We are seeking help with these goals. What can you do to help, to volunteer with the many opportunities we have through RALALA.? We are looking for board members and an assistant Treasure, committee members to help with membership, the newsletter, monitoring the buoys. We are looking for volunteers to help with the boat landing ILIDS , monitoring the water quality with secchi dish readings, etc. We can find a spot for you!

We offer articles in this newsletter that will educate and inform as we continue the summer as best we can. Use this time to help our lakes by being good stewards. We offer many tips and resources for that to be very natural.

In these stressful times, we want to support each other as best we can. Who can you help in your community and OUR communities of our lakes area? We want to support our businesses of Emily and Outing and to do so, the board compiled a list for an easy directory. We’ve listed those we know for an easy reference guide for all of us to use.

ASSOCIATION OF CASS COUNTY LAKES HOLDS FIRST MEETING MAY 29

(ACCL) Association of Cass County Lakes held it's first virtual meeting. It was fairly light participation. There was a fair amount of discussion led by Ron Meyer of the Pine River Watershed about the connection of lake associations and farmers in the lakes area. Ron's engagement with folks around the Pine River Watershed is based on the premise that we can't protect our waters without managing the surrounding land and that involves sustainable farming practices.

The process is straightforward: practices in farming that absorb more water in the soil, stop excess run off and thus protect the quality of our water.

The way to do this is through following the 5 sustainable farming principles listed below. More information can be found on the Pine River Watershed website.

- Sustainable requires direct activities to preserve, protect, and improve the use of the resources.
- Improving the efficiency in the use of the resources
- Agriculture that does not protect, improve the rural lifestyle and social welfare is unsustainable.
- Strengthening the resilience of people, communities and ecosystems is essential for sustainable agriculture
- Sustainable agriculture and alimentation need responsible and effective governance mechanism.

Ron would also be looking for a lake association to partner with in a Cass County pilot project called "Up the Creek Meats" to structure a direct sale of meat from farmers who do sustainable farming.

CASS COUNTY LAKE ASSOCIATION NEWS

- Lake associations are holding some summer activities while doing modification to others (especially annual meetings).
- Levi Bergstrom, Cass county AIS inspector coordinator suggested that we are down on the number of inspectors available this year. For more information contact Gary Langer, RALALA inspector committee member.

THE OUTING DECONTAMINATION STATION IS NOW OPEN FRIDAY THROUGH SUNDAY FROM 8 TO 6 PM.

There will be Annual Meetings of lake associations this year in some form keeping with the ruling of a 501c3 needing to elect directors annually.

RALALA OPINION SURVEY: PRIORITY FOR LEAVITT AND SMOKEY HOLLOW

Article by Darril Wegscheid

In the summer of 2019, the RALALA Board authorized an "opinion survey" of lake property owners, with Leavitt and Smokey Hollow being the first stage. That was undertaken in the winter of 2019-2020.

Thanks go to the nearly 30% of the property owners on these two lakes for their responses.

Questions covered their family ownership of the property - their usage, frequency and length-of-time-used as well. A list of activities for resource enjoyment was included, and were folks asked to indicate their frequency of time in that activity - boating, fishing, gardening, crafting, ATV and snowmobiling, etc. - are ALL woven through the responses. All of this was gathered prior to the COVID-19 pressures.

Valuable input was collected for RALALA as to the how folks ranked our efforts: protecting the lakes - testing the water, preventing AIS, education about water quality - all ranked very high.

For more and more folks, the water quality in the "watershed" is a key and growing concern, and so more water sampling and attention is likely for the flowages into and between our wonderful lakes.

For Leavitt, there is a strong interest in evaluating the walleye fishing quality of the lake, with more discussion to follow. The replacement of the Hwy 58 bridge years ago apparently disrupted the Spring spawning run from Lawrence. That was subsequently modified about a decade ago, and folks indicate that walleye are seen moving up the stream in the Spring. However, the success seems less than desired. The possibility of stocking walleye for "local enjoyment" will be discussed this summer. The MN DNR budget is limited, and priority for their stocking efforts goes into "larger fishing resources", but they likely will support a local effort to stock walleye in a "suitable lake with a workable plan". I am optimistic that with the support of property owners, the local sportsmen, and the community that this can be readied by the 2021 stocking season - and coordinated with the DNR stocking of Roosevelt.

**Photo of Leavitt lake thanks to
Edina Realty - Brainerd Lakes Area**

LIST OF EMILY & OUTING BUSINESSES

RALALA would like to support the local businesses. We offer this list, that we compiled with their permission, as a directory of 2020 community services at no charge to those listed. Our apologies to anyone omitted or for any unintentional errors.
