

Fibersol® is the premier fully Soluble Dietary Fibre, offering a multi-functional ingredient which can be used to improve Nutritional profiles, increase Fibre content and elicit health benefits in any Food System. **Fibersol®** allows you to reach your desired Fibre content/Label claims in your product without any effect on taste or viscosity.

This means you can provide products for health-conscious consumers which gives them the Dietary Fibre they need without sacrificing the taste, aroma and texture they want.

Our line of ingredients can easily be added to existing formulations with minimal adjustments, making it ideal for line extensions because minimal reformulation is required. There is virtually no application which Fibersol ingredients cannot fit into and our high-quality Fibre ingredients stay consistent no matter what the form (agglomerated, liquid, etc.).

Fibersol® was re-approved on June 14th, 2018 by the FDA as a Dietary Fiber after an extensive evaluation of 26 different Fiber sources which resulted in several being delisted. Our approval was based on over 20 years of clinical research and 100 published studies. Note that **Fibersol®** has been approved by Health Canada since 2013.

FIBERSOL®

- adds no flavour, taste or colour
- forms a clear solution with minimal viscosity
- highly concentrated and water-soluble for ease of formulation
- versatile in all formulations (heat, acid, shear and freeze/thaw stable)
- is well tolerated
- can be used for Sugar Reduction
- delivers Satiety
- is a Prebiotic

We offer Applications Expertise and can provide prototype formulations in Dairy, Beverage, Baking, Confectionery, Cereal, Snacks, Dips, Sauces, Dressings and Meats in addition to Health & Nutritional products. For more information, visit us at www.fibersol.com or contact me directly.
