About Micon, Inc.

Micon is a global provider of value priced, premium quality products to help medical device dealers and manufacturers thrive in today's changing healthcare environment.

The US-based company is operated by international healthcare executives with decades of experience in implementing innovative, quality and cost-effective initiatives for businesses to thrive in today's ever-changing healthcare market. Their combined knowledge and expertise results in the ability to bridge and capture opportunities between Asia, North America, Europe, India, the Middle East and other global markets.

While many large medical device companies can afford to hire materials managers and strategic sourcing personnel in low-cost markets, this would be considered an unbearable expense for most smaller companies and regional distributors. And for manufacturers, they are able to gain business through Micon's network of customers without concern of them meeting the minimum order quantities.

Micon has multi-lingual agents with “feet-on-the-ground” based in China to source products and qualify manufacturers. This eliminates the need for the dealers to have employees there, or even having to travel. Micon is able to confirm regulatory requirements and conduct quality control inspections. And with very low overhead, Micon passes those savings on to the dealers.

- Micon connects medical device manufacturers and dealers
- USA-based company with USA banking and transactions
- Channel creation
- Multi-lingual agents
- Focus on smaller regional dealers outside the US
- Qualifies manufacturers (CE marking, ISO Certification, CFDA Registration)
- Marketing and sales training
- Global business development
- “Feet-on-the-ground” based in China
- Clinical support

As an additional service, should a particular product be required, Micon can often source it through our broad network of global manufacturers. Simply let us know the requirements, and we will activate our network to find what is needed.
