## Get the facts on COVID-19

### What is the Coronavirus?

Coronaviruses are a large family of viruses that are common in people and many different species of animals. The current outbreak involves a new coronavirus that causes a condition called COVID-19.

### How does COVID-19 spread?

The virus is thought to spread mainly from person-to-person. This mostly occurs when respiratory droplets from an infected person land in the mouths or noses of people who are nearby via a cough or sneeze.

### What are symptoms of the virus?

The following symptoms may appear 2-14 days after exposure:

- Fever
- Cough
- Shortness of breath

## Minimize your risk:

**Protect yourself and your community from getting and spreading respiratory illnesses like coronavirus.**

- Avoid close contact with people who are sick.
- Avoid touching your eyes, nose, and mouth.
- Stay home when you are sick.
- Cover your cough or sneeze with a tissue, then throw the tissue in the trash.
- Clean and disinfect frequently touched objects and surfaces using a regular household cleaning spray.
- Wash your hands often with soap and water for at least 20 seconds.

## How is it treated?

There is no specific antiviral treatment recommended for COVID-19. People who think they may have been exposed should contact a healthcare provider immediately and seek supportive care to help relieve symptoms. Depending on the severity of your case, **you can be treated at home for this infection at this time using MeMD.**

## We're here to help

Connect with a MeMD medical provider 24/7 if you're concerned that you or a family member is exhibiting symptoms of COVID-19.
