

# PONDS & WETLANDS

**Wetlands are among the most productive wildlife habitats on earth!**

*For many birds and animals, like the Canada goose, wood duck, great blue heron, muskrat, beaver, snapping turtle, and bullfrog... wetlands are the only places they can live.*

*For animals and birds, like black bear, moose, deer, wood frogs, and marsh hawks, wetlands are not their home, but are important for a part of their life cycle or during certain times of the year.*
