8	Hornet
9	Fleas
10	Cluster Flies
11	Carpet beetle
12	Bird Mites
13	Cockroach
14	Bedbugs
15	Other Insects

Callout

This service is for general inspections or site surveys with no treatment included.

This service is usually used for clients hearing noises in the loft, but unsure if it's pest related or not, so want a professional to inspect and advise.

Rats

Tornado Rat Treatment includes x3 visits for internal or external rat infestations.

We use a wide range of products, internally we avoid using any poisons to prevent rats dying in wall cavities and voids creating horrendous smells within your home or office.

We are also specialists in finding rat entry points and providing recommendations how to prevent a reoccurring rat infestation, throwing poison down is not the long-term solution, entry point tracking is the most important task during our site survey.

We use Pest CCTV, UV tracking dust and gels + many other products to track the rats' routes. We can also support with drain surveys / repairs if required.

All average (residential) rat infestations are resolved within 3 visits, some unfortunately require additional which we would discuss in advance if required.

Terrace blocks can be problematic with entry point tracking, for example, if the rats are gaining entry via another house within the block and moving across cavities, walls, floors to your home you would need all houses within the block checking, that's if no faults are found leading into your home.

Mice

Tornado Mice Treatment includes x3 visits for internal or external Mice infestations.

We use a wide range of products to get the infestation under control rapidly. We are also specialists in finding Mice entry points, whilst providing recommendations how to prevent a reoccurring Mice infestation, throwing poison down is not the long-term solution, entry point tracking is the most important task during our site survey.

We use Pest CCTV, UV tracking dust and gels + many other products to track the Mice routes. with Mice only needing 5-6mm they are easily missed to the untrained eye.

All average (residential) Mice infestations are resolved within 3 visits, some unfortunately require additional which we would discuss in advance if required.

Terrace blocks can be problematic with entry point tracking, for example, if the Mice are gaining entry via another house within the block and moving across cavities, walls, floors to your home you would need all houses within the block checking, that's if no faults are found leading into your home.

Grey Squirrel

Tornado Grey Squirrel Treatment includes x3 visits

All squirrels will be trapped using heavy duty traps, usually within the loft space.

Up to 3 visits is enough to clear the average infestation, if extra visits are required, we will speak with you well in advance.

Traps need to be checked daily, unless we deploy CCTV to monitor the traps, this will be discussed on setup day by the technician.

We get asked daily if we can catch and release Grey squirrels, unfortunately the grey squirrel is regarded as an invasive non-native species following its inclusion under Schedule 9 of the Wildlife and Country Act 1981.

Under Schedule 9 of the WCA, it is illegal to release a grey squirrel into the wild, or allow one to escape, without a license granted by Natural England.

Moles

Tornado Mole Control offers unlimited visits for a set charge, you are also provided with a 1 month guarantee after all our equipment is lifted.

Should any new moles relocate into your garden within 1 month there will be zero charge and will come back out for FREE... After 1 Month the job will be treated as a new job.

Moles are solitary creatures, so it's usually 1 mole within an average size residential garden, the challenge is once you have mole runs, other moles can relocate into the tunnel system, this could be in two weeks, two-month, two year or you could be lucky and never have another issue.

We've done thousands of mole treatments, and get asked weekly how can you prevent, and we're always honest and share there is no effective mole deterrent on the market, some clients have had success by installing a physical barrier underground, but it cost thousands to install and still isn't 100% mole proof in my opinion.

We do offer annual mole contracts for the residential clients with ongoing issues, usually backing onto farmland / woods etc, ask Mark for a quote if this is something you are interested in, one annual payment which includes unlimited call outs throughout the year.

Ants

Tornado Ant Treatment includes 1 treatment + 1 month Guarantee.

Please be reminded that gardens are an Ants natural habitat, our treatment should only be booked for Ants in and around your home or business.

Company Registration Number 12162504 Registered Office: Elmfield Road, New Rossington, Doncaster, DN110BS

Office: 01302 866714 Mobile: 07377 995318 Email: Mark@tornadopestcontrol.co.uk Website: www.tornadopestcontrol.co.uk

Our main treatment on crawling ants exploits the natural feeding behaviour of ants to ensure rapid and complete control of the full colony, with flying ants we will usually apply a spray treatment, this would be reviewed during the initial inspection.

All our products are professional use only and highly effective in all situations.

Wasp

Professional wasp nest treatment and removal, we have a wide range of high reach equipment with camera attachments for those tricky locations.

If you have multiple wasp nests at the same address, we will only charge £10 extra for each additional nest.

All our wasp nest treatments have an amazing 1-month guarantee.

Note If we are called to a wasp nest, but on inspection it's bumblebee or honeybee a £30 call out charge will be applied, we can also offer advise depending on the type of bee, but we WILL NOT treat any type of bee.

Hornet

Professional wasp nest treatment and removal, we have a wide range of high reach equipment with camera attachments for those tricky locations.

If you have multiple Hornet nests at the same address, we will only charge £10 extra for each additional nest.

All our Hornet nest treatments have an amazing 1-month guarantee.

Note If we are called to a Hornet nest, but on inspection it's bumblebee or honeybee a £30 call out charge will be applied, we can also offer advise depending on the type of bee, but we WILL NOT treat any type of bee.

Fleas

Professional Flea Treatment Including a free follow up treatment after 14 days. We also Provide a 1 Month guarantee after the second treatment is completed.

All customers will be provided with a Pre and after treatment guide, this is to support the treatment, it's essential these guides are followed by all our clients.

We use the best products on the market for Fast flushing and knockdown action, which includes Insect Growth Regulators which work by disrupting the normal development of flea eggs and larvae.

The home / business will need to be empty during treatment + a minimum of 2 hour after the treatment was completed, entry time will be confirmed by the technician on treatment day.

Cluster Flies

Tornado Cluster Fly treatment includes x1 visit + 1-month guarantee.

Our Exodus machine Ultra Low Volume (ULV) spraying utilises minimal volume of formulation required to produce desired effect with maximum economy.

It creates small airborne droplets which diffuse into the treated areas and settle onto surface, Ideal for the control of insects, with rapid results on cluster fly.

We also have other methods available which would be reviewed by our technician. All our products are professional use only.

Bird Mites

Tornado Bird Mite Treatment Includes 1 treatment + 1 Month Guarantee.

Our initial and most important task is locating the source and removing it, we will then decide the best treatment to eradicate the bird mites within the home or office.

Bird mites are tiny, nasty, aggressive little insects that live off the blood of chicks being reared in nests. However, once the chicks fledge and leave the nest, they have no food source and go in seek of a new one, and that can sometimes lead to bird mites coming inside the house to feed on your blood

These little critters can quickly multiply into thousands, leaving you feeling overwhelmed. The relentless biting, itching, crawling sensation, and lack of sleep are the physical symptoms that can propagate a whole host of secondary mental health issues.

Once a home is heavily infested, they can be very difficult to eradicate fully, usually bird mites go unnoticed, adults are less than 1 mm in size, visible to the human eye. Eggs and nymphs cannot be seen without magnification.

Cockroach

Tornado Cockroach Treatments Include a free follow up treatment after 14 days. We also Provide a 1 Month guarantee after the second treatment is completed.

We use the best products on the market starting with the dry super-heated steam up to 180 ° C kills 100% of the eggs and 90% of the Cockroach, we will then follow with a professional grade cockroach gel bait + special cockroach traps.

The home / business will need to be empty during treatment + a minimum of 2 hour after the treatment was completed, entry time will be confirmed by the technician on treatment day.

Bedbugs

Company Registration Number 12162504 Registered Office: Elmfield Road, New Rossington, Doncaster, DN110BS

Office: 01302 866714 Mobile: 07377 995318 Email: Mark@tornadopestcontrol.co.uk Website: www.tornadopestcontrol.co.uk

Tornado Bedbug Treatments Includes a free follow up treatment after 14 days. We also Provide a 1 Month guarantee after the second treatment is completed.

We use the best products on the market for Fast flushing and knockdown action, which includes Insect Growth Regulators, we also use steam treatment on all our bedbug treatments. The dry super-heated steam up to 180 ° C kills 100% of the eggs and 90% of the adult bed bugs.

Insect growth regulators (IGR's) are fundamental as these products aim to inhibit their life cycle, controlling the population and therefore keeping their numbers down until they eventually stop reproducing and extinguish.

One of the main advantages of IGR's is the fact that they work for long-term control which means less chances for repeated expensive callbacks and retreats. Another great advantage is that they have little toxicity to mammals since they mainly disrupt growth and development specific to insects. This makes them safe to use in households with dogs and cats.

Insect growth regulators work by limiting the bug's egg production, preventing nymphs from maturing and becoming adults, and reducing their ability to reproduce. They are often erroneously nicknamed as "birth control systems for bugs" but in reality, they work by preventing the bugs from reaching adulthood so they cannot reproduce

The home / business will need to be empty during treatment + a minimum of 2 hour after the treatment was completed, entry time will be confirmed by the technician on treatment day.

All customers will be provided with a Pre and after treatment guide, this is to support the treatment, it's essential these guides are followed by all our clients. But perhaps one of the most important steps in pre-treating is keeping the least amount of clutter around. This will significantly reduce the opportunity for bed bugs to find hiding spaces and will make treating the living areas a much easier process.
