Greenline surface sanitiser

CLEANING METHODS

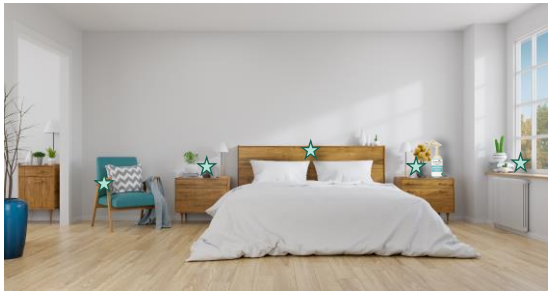
The intention of Greenline surface sanitiser is not to apply it to the surface as a cleaner but to compliment cleaning the home from everyday mess. Our surface sanitiser will kill bacteria and germs that grow or settle on surfaces around the home.

To use around the home in the bedroom, bathroom, kitchen and general living areas simply spray and leave for 30 seconds to any surface and the sanitising effect will occur.

Examples of use include before and after visitors or when the kids come home from school and even after you bring the groceries home from the shops..



SPRAY

Bedroom bed heads, side tables chair armrests, window-sills

Laundry joinery shelves, benchtop, laundry tub, plug and waste, spout and taps, equipment

Kitchen tabletops, benchtops, fridge handles, cupboard door faces

General living area, coffee tables, dining table, chairs backrest and arm rests, buffet tops tv remotes, light switches, door handles

Greenline surface sanitiser

SURFACES

A home contains many different types of surfaces within each room. Greenline surface sanitiser is a light active solution and is suitable for all protected hard surfaces, like plastic, vinyl, timber laminates, and veneers, glass, ceramic and metals.

The rear label of all Greenline Cleaning products outline recommended surfaces for the product. Each surface type requires a different cleaning method to obtain the expected result of cleaning. This is covered in the cleaning methods section.

Important information regarding stainless steel.

Stainless steel is a material that is difficult to clean and shine without ghosting or swipe marks being left behind. The marks left behind are just residue caught on the surface and need to be wiped off. Often a dry towel is enough, but sometimes the surface has grooves and requires another rinse.

Stainless steel is a strong and durable metal that is widely used to make and cover items. It has various grades of metal quality that match the varying degrees of resistance to corrosion. It is a pliable metal and can be easily cut, shaped and seamlessly welded together. The surface can be finished with grooves or flat without. In the kitchen, stainless steel is a common stylish finish found on joinery, fridges, ovens, cook tops, range hoods and machine parts.

Greenline surface sanitiser

DIRECTIONS

All Greenline cleaning products are strong and clean very efficiently and effectively. Generally a light spray across the surface is all that is required. And perhaps an extra spray on a heavy spot if required.

The rear label of all Greenline Cleaning products outline specific cleaning directions for the product to obtain the best cleaning results.

For general surfaces such as vanity benchtops, cupboard doors, toilet seats, lids and bathtubs, Greenline surface cleaner will sanitise and kills 99.999% of bacteria and germs when left on the surface for only 30 seconds. To complete the process, wipe off with a clean wet absorbent cloth.
