Standard vaccines increase HIV-1 transcription during antiretroviral therapy.

Yek C¹, Gianella S, Plana M, Castro P, Scheffler K, Garcia E, Massanella M, Smith DM.

Author information

Abstract

OBJECTIVES: Curative strategies using agents to perturb the HIV reservoir have demonstrated only modest activity, whereas increases in viremia after standard vaccination have been described. We investigated whether vaccination against non-HIV pathogens can induce HIV transcription and thereby play a role in future eradication strategies.

HAZARDS of GMOS: ALL Vaccines are GMO : GOD Gave HUMANS ALL FOOD for OUR SOUL GOD DID Not Make Oncogenes!

Trends in Parasitology, April 2014, Vol. 30, No. 4

Effects of environmental change on zoonotic disease risk: an ecological

1. Uncontrollable, unpredictable impacts on safety due to the genetic modification process *
 - Scrambling the host genome *
 - Widespread mutations *
 - Inactivating genes *
 - Activating genes *
 - Creating new transcripts (RNAs) including those with regulatory functions *
 - Creating new proteins *
 - Creating new metabolites or increasing metabolite to toxic levels *
 - Activating dormant viruses *
 - Creating new viruses by recombination of viral genes in GM insert with those in the host genome *
2. Toxicity of transgene protein(s) introduced (intentionally or otherwise)
 - Transgene protein toxic *
 - Transgene protein allergenic or immunogenic *
 - Trangenic protein becoming allergenic or immunogenic due to processing *
 - Unintended protein created by sequence inserted may be toxic or immunogenic
3. Effects due to the GM insert and its instability *
 - Genetic rearrangement with further unpredictable effects *
 - Horizontal gene transfer and recombination *
 - Spreading antibiotic and drug resistance *
 - Creating new viruses and bacteria that cause diseases
 - Creating mutations in genomes of cells to which the GM insert integrate including those associated with cancer *
4. Toxicity of herbicides used with herbicide tolerant GM crops *

Independent analysis of the Priorix Tetra vaccine confirmed the presence of the following contaminating retroviruses:

These viruses are known to be adventitious vaccine contaminants and are known to be potentially dangerous, which is why manufacturers are required to verify that they are completely absent from the vaccine. The presence of potentially dangerous adventitious viruses which certifies that there is no adequate control on vaccines because if there were, these elements would have been detected.

- Human endogenous retrovirus K - 32 sequences
- Equine infectious anemia virus - 2 sequences
- Avian leukosis virus - 2 sequences
- HERV-H/env62 - 4 sequences

Residual DNA/RNA deriving from cultured cells - Total amount of DNA: 1.7-3.7 µg/dose, the 80% of which was human (Human fetal DNA / RNA from the MRC-5 cell line). Other amount of DNA: chicken

Controversial H5N1 influenza work likely to resume

International experts hammer out the future of their field at a top-level workshop on how to fund certain types of work on bird flu.

Brendan Maher

19 December 2012

Some scientists may resume controversial experiments on the potentially deadly avian influenza virus H5N1, following a high-level meeting this week. The suggestion comes in the wake of a global debate about the risks and benefits of such research and a voluntary moratorium on the experiments lasting nearly a year.

International flu experts, research funders and public-health officials met on Monday and Tuesday this week at the National Institutes of Health (NIH) in Bethesda, Maryland to discuss the future of the work — so-called gain-of-function experiments that change the properties of what is called highly pathogenic avian influenza H5N1 in ways that might make it more transmissible and infectious in humans, in order to investigate the possible natural evolution of the virus.

The meeting did not reconcile all differences of opinion over the risks and benefits of such work, or explicitly address the moratorium, although it appears likely that some investigators might resume H5N1 work.

Greg Kriobloch

Certain experiments which scientists hope may help with flu pandemic preparedness, may be possible again if the voluntary moratorium on them lifts.

GMOS cause aberrant expression of animal retroviruses, end up in milk, food!

Mikovits and Ruscetti file the patent for the PCR detection XMRV and Variants: SARSCOV2, XMRV2/Omicron April 6, 2010

CANCER [LIVE!]

Combination therapy for prostate cancer using botanical compositions and bicalutamide
 WO 2012061790 A1

ABSTRACT
 Botanical compositions comprising non-alcoholic organic extracts of Ganoderma lucidum, Salvia miltiorrhiza, and Scutellaria barbata for use in conjunction with bicalutamide therapy for cancer therapy, are provided. Methods for treatment or therapy of prostate cancer in a human is provided, the method comprising: administering an effective amount of a botanical composition that is effective for reducing androgen receptor protein expression; and administering concurrently an effective amount of a compound having anti-androgen activity, wherein the concurrent administration of the compound and the botanical composition achieves a therapeutic effect that is more effective than either agent alone.

Functional characterization of nutraceuticals using spectral clustering: Centrality of caveolae-mediated endocytosis for management of nitric oxide and vitamin D deficiencies and atherosclerosis

Anton Franz Fliri* and Shama Kajiji

Emergent System Analytics LLC, Clinton, CT, United States

It is well recognized that redox imbalance, nitric oxide (NO), and vitamin D deficiencies increase risk of cardiovascular, metabolic, and infectious diseases. However, clinical studies assessing efficacy of NO and vitamin supplementation have failed to produce unambiguous efficacy outcomes, suggesting that the understanding of the pharmacologies involved is incomplete. This raises the need for using systems pharmacology tools to better understand cause-effect relationships at biological systems level. We describe the use of spectral clustering methodology to analyze protein network interactions affected by a complex nutraceutical, Card Miracle (CM), that contains arginine, citrulline, vitamin D, and antioxidants. This examination revealed that **interactions between protein network affected by these substances modulate functions of a network protein complexes regulating caveolae-mediated endocytosis (CME), TGF beta activity, vitamin D efficacy and host defense systems.** Identification of this regulatory scheme and the working of embedded reciprocal feedback loops has significant implications for treatment of vitamin deficiencies, atherosclerosis, metabolic and infectious diseases such as COVID-19.

FIGURE 4

Caveola mediated endocytosis (CME) modulates activities of a reciprocal feedback loops that finetunes ROS production, TGF beta activity, Nitric oxide levels and Calcitriol production.

Fake Science: XMRV, COVID-19, and the Toxic Legacy of Dr. Judy Mikovits

Stuart J.D. Neil¹ and Edward M. Campbell²

Abstract

One cannot spend >5 min on social media at the moment without finding a link to some conspiracy theory or other regarding the origin of SARS-CoV2, the coronavirus responsible for the COVID-19 pandemic. From the virus being deliberately released as a bioweapon to pharmaceutical companies blocking the trials of natural remedies to boost their dangerous drugs and vaccines, the Internet is rife with far-fetched rumors. And predictably, now that the first immunization trials have started, the antivaccine lobby has latched on to most of them. In the last week, the trailer for a new “bombshell documentary” *Plandemic* has been doing the rounds, gaining notoriety for being repeatedly removed from YouTube and Facebook. We usually would not pay much heed to such things, but for retrovirologists like us, the name associated with these claims is unfortunately too familiar: Dr. Judy Mikovits.

If my people, who are called by my name, will humble themselves, pray & seek my face & turn from their wicked ways, then I hear from heaven, and I will forgive their Sin and will heal their land

EXPRESSION OF Synthetic model SYNCYTIN IN COVID vaccines expected to result in female infertility and the Development of CANCER

Head of Pfizer Research: Covid Vaccine is Female Sterilization

Health & Money News / December 2, 2020 / News

The vaccine contains a **spike protein (see image) called syncytin-1**, vital for the formation of human placenta in women. If the vaccine works so that we form an immune response AGAINST the spike protein, we are also **training the female body to attack syncytin-1**, which could lead to infertility in women of an unspecified duration.

Syncytin expressed from HERV required for **placenta** formation in mammals part of the Spike Protein expected to make Antibodies

Pfizer filed for Emergency Approval, December 2020

An endogenous retroviral envelope syncytin and its cognate receptor identified in the viviparous placental *Mabuya* lizard

Edited by R. Michael Roberts, University of Missouri-Columbia, Columbia, MO, and approved October 26, 2017 (received for review August 23, 2017)

Significance

Retroviral envelope gene capture and exaptation for a placental function has been demonstrated in mammals. Remarkably, placental structures have also emerged on rare occasions in nonmammalian vertebrates, resulting in related modes of reproduction. The *Mabuya* lizard, which emerged 25 Mya, possesses a placenta closely related to that of mammals. Here, we identified a specific retroviral envelope gene capture that shows all the characteristic features of a bona fide mammalian syncytin, being conserved in *Mabuya* evolution, expressed in the placenta, and fusogenic. Together with the present identification of its cognate receptor, these results show that syncytin capture is not restricted to mammals and is likely to be a major driving force for placenta emergence.

- The vaccinations are expected to produce antibodies against spike proteins of SARS-CoV-2. However, spike proteins also contain **syncytin-homologous proteins**, which are essential for the formation of the placenta in mammals such as humans. It must be absolutely ruled out that a vaccine against SARS-CoV-2 could trigger an immune reaction against syncytin-1, as otherwise **infertility of indefinite duration could result in vaccinated women**.
- The mRNA vaccines from BioNTech/Pfizer contain **polyethylene glycol (PEG)**. 70% of people develop antibodies against this substance - this means that many people can develop allergic, potentially fatal reactions to the vaccination.
- The much too short duration of the study does **not allow a realistic estimation of the late effects**. Nevertheless, BioNTech/Pfizer apparently submitted an application for emergency approval on December 1, 2020.
