Hi,

Sounds good. My daughter and I were thinking of going to the inauguration on the 20th, but I am free anytime on the 19th.

We finally got all the chips scanned. Now we need to compile the data and start looking at it. Malasky's scanner died twice, making this difficult. The RNaseL info is also getting put together.

Mike

Hello Mike

Happy New Year!

I will be in Frederick (largely for family) on Saturday January 17- noon Tuesday January 20th. We have some new and very exciting data with regard to the RNaseL aspect of our patient cohort. If you happen to be in town and would like to get together for lunch or a brief meeting Tuesday morning with Frank and myself please let me know.

Best regards,
Judy
