

Envirowet PCLL8

Agricultural Adjuvant

Powered by Surfactant Technologies Australia

Advanced Agricultural Adjuvant Technology

Envirowet PCLL8 is a high-performance agricultural adjuvant developed to improve the effectiveness, coverage and efficiency of spray applications across a wide range of agricultural uses.

Designed with Advanced Wetting Technologies (AWT), **Envirowet PCLL8** helps reduce surface tension, allowing spray droplets to spread more evenly across plant surfaces. This improved coverage supports better contact between the active ingredient and the target surface, helping growers achieve more consistent application outcomes.

Unlike conventional wetters that can rely on high-use rates or additional oils and drift agents, **Envirowet PCLL8** is engineered to perform at low concentrations while maintaining strong wetting and spreading performance. Its technology assists with spray uniformity, penetration and surface interaction, particularly on difficult-to-wet plant surfaces.

Envirowet PCLL8 has been developed for modern agricultural spray programs where efficiency, performance and environmental responsibility are increasingly important.

By improving the behaviour of spray droplets, it can help optimise chemical use, reduce wastage and support more targeted applications.

Key Benefits:

Improves wetting & spreading across leaf surfaces

Helps achieve more uniform spray coverage

Supports better contact with difficult-to-wet plants

Performs effectively at low application rates

May reduce reliance on additional oils or drift agents

Designed to improve spray efficiency & consistency

Supports more responsible & targeted agricultural applications

Built for Modern Agriculture

With increasing pressure on growers to improve productivity while reducing environmental impact, **Envirowet PCLL8** provides a practical and effective adjuvant solution.

Its advanced wetting performance supports better spray outcomes, helping farmers, agronomists and applicators get more from every application.

Envirowet PCLL8 is a smarter approach to agricultural spray performance - improving coverage, efficiency and confidence in the field.
