MADE **IN** GERMANY

WE PRODUCE ORIGINALS

EDELRID – THE ROPEMAKER

We have been manufacturing our core products here in Isny/Allgäu for over 150 years now. Today, we generate more than 60 % of our sales volume through products made in Germany.

EXCELLENT PRODUCTS

INNOVATION IS OUR MOTIVATION

When it comes to developing new products, we are inventors and thought leaders.

QUALITY WITH CONSISTENCY

WE HAVE BEEN GROWING RELIABLY FOR YEARS

Constant growth, double the number of employees and new products in the last 10 years – we are the reliable constant in a rapidly changing world.

STEEL STORY

BUILT TO LAST

Sustainability is one of EDELRID's core values, but while you have countless possibilities of producing sustainable textiles, you will quickly reach the limits when it comes to metals. Transferring our claim of sustainability to our carabiners, quickdraw kits, belay devices and pulleys therefore was quite a challenge. Nevertheless, we finally got there and laid the foundation for working sustainably with metals!

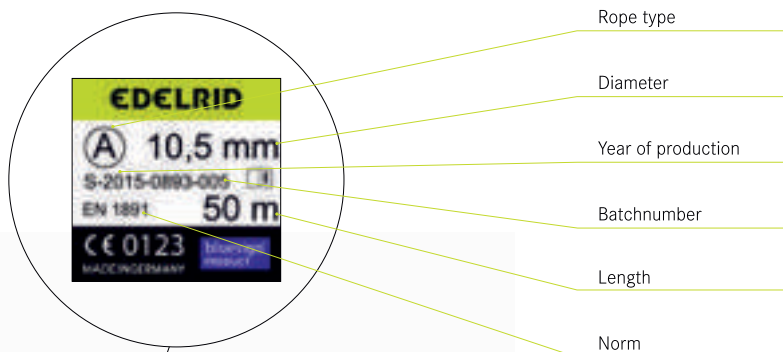

ROPES

We are the first rope manufacturer to adapt our ropes to meet the tough demands of the Swiss bluesign® system. It is the most stringent environmental standard for the production of textile products: independent, internationally recognised and based on the five principles of resource productivity, consumer safety, water emission, air emission as well as occupational health & safety.

TECHNOLOGY

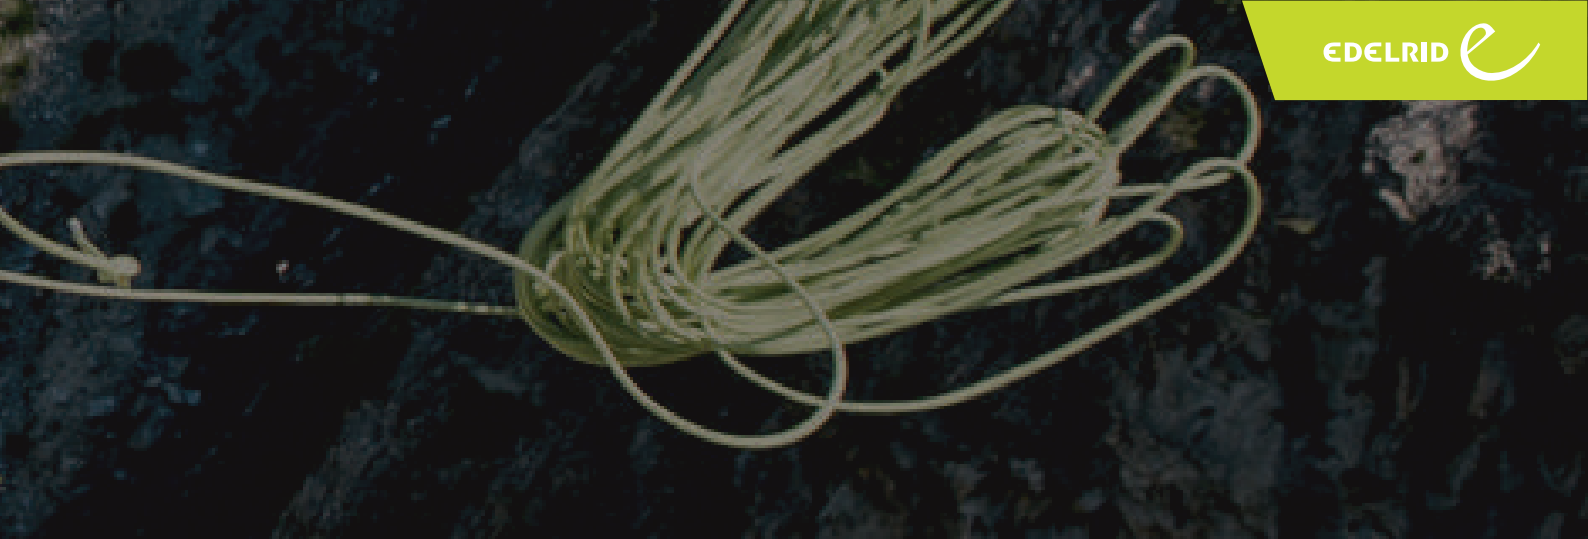

We apply complex finishing treatment to make our ropes durably water - and dirt resistant. This prolongs their service life and gives them their tried and tested EDELRID handling and flexibility. All of our finishing treatment treatment are bluesign approved and involve only strictly-regulated, environmentally-friendly processes that contain no harmful substances.

WORK SAFETY

Triple Lock buckle

The Triple Lock buckle is the safest and most innovative buckle in the EDELRID range. We primarily use it for our top harnesses. Triple Lock buckles are particularly safe as three motions are required to open them. Furthermore, they cannot be opened when under load. Despite this high level of safety, Triple Lock buckles are still quick and easy to use. They can be fully opened, enable rapid length adjustment and, thanks to the large push buttons, can even be conveniently operated when wearing gloves. Triple Lock buckles are tested in accordance with ANSI criteria.

Weight	1.580 kg
Leg Loop Size	45-75 cm
Waist Belt	75-125 cm
Size	S - XL
Certification	EN 813, EN 358, EN 361

MRP	₹ 36,000

Edelrid Vertic Triple Lock II Harness

CARABINERS

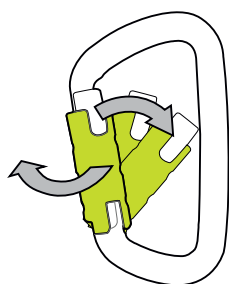

TECHNOLOGY

Carabiners are a key element in the safety chain. That is why at EDELRID the latest findings from research and material technologies are incorporated into our development.

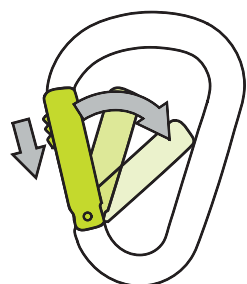

Screwgate

These classic carabiners cover a wide range of uses. The easy-grip threaded sleeve allows the gate to be closed quickly, intuitively and one-handed if required. Screwgates have a manual locking mechanism which must be actively closed to ensure full safety.

Twist Lock

Twist-lock carabiners have a twisting sleeve. You have to open them by turning the sleeve approximately 90° before you can open the gate. Twist-lock carabiners are auto-locking carabiners. They are self closing, shut automatically as soon as you release the gate and can still be operated with one hand. They are ideal for situations where both safety and speed are paramount.

Slide Gate

A new innovation from EDELRID. This new generation of locking carabiners has an automatic locking mechanism integrated into the gate. The slide gate is auto-locking, quick, intuitive and can be operated with one hand. When used as a quickdraw, the slide gate minimizes the risk of accidental unclipping – perfect for precarious belay points, traverses or moral support on exposed sections. As there is no barrel that can get in the way, the carabiner can rotate freely in bolts and belay devices. This improves handling for better stance organisation or when belaying.

HELMETS

EDELRID helmets are characterized by good ventilation, innovative closure systems and high comfort. For more than 25 years, they have stood for quality and safety.

Hybrid Helmets

Hybrid helmets combine the advantages of both softshell and hardshell helmets. The outer shell is made of robust and impact-resistant ABS. Underneath the outer shell, an internal EPS (expanded Polystyrene) foam shell provides excellent shock absorption. Hybrid helmets are particularly robust all-rounders.

Hardshell Helmets:

Hardshell helmets have an extremely robust and impact-resistant shell made of polypropylene or ABS. The internal textile webbing cradle increases their energy absorption and ensures that there is clearance between the head and the shell. Their extremely sturdy construction makes this type of helmet ideal for rental use at mountain schools or adventures parks.

SLINGS

Tech Web webbing combines the low weight and high-tensile strength of Dyneema® with the knot stability of polyamide. This is made possible by its special kernmantel construction. The Dyneema® core is given a polyamide sheath in a complex kernmantel weaving technique.

Kernmantel construction

High-strength Dyneema® core keeps weight to a minimum. The polyamide sheath protects the core from external influences (e.g. UV radiation) and increases overall abrasion resistance.

Saving weight

Weighing 22 g/m, Tech Web lies between 8 mm Dyneema® (12 g/m) and 16 mm polyamide (56 g/m).

Greater knot stability

Tech Web 12 mm has significantly greater knot stability than 8 mm Dyneema® and 16 mm polyamide. This means that it provides additional safety, particularly when used as a belay sling. As a knotted sling Tech Web complies with the EN 354 standard (22 kN) and therefore may be sold by the meter.

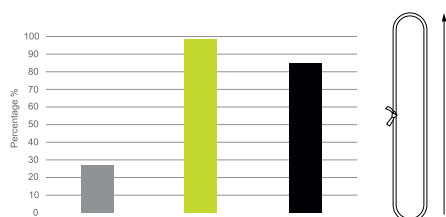

Fig.: Tensile strength tape knot as a percentage of the original strength of the sewn sling.
* Dyneema® slips at about 5 kN and therefore may not be knotted.

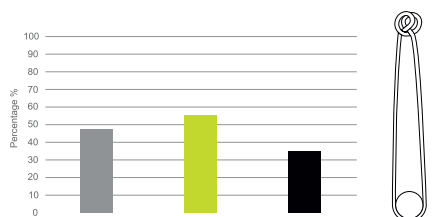

Fig.: Tensile strength clove hitch as a percentage of the original strength of the sewn sling.

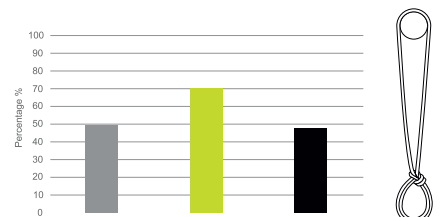

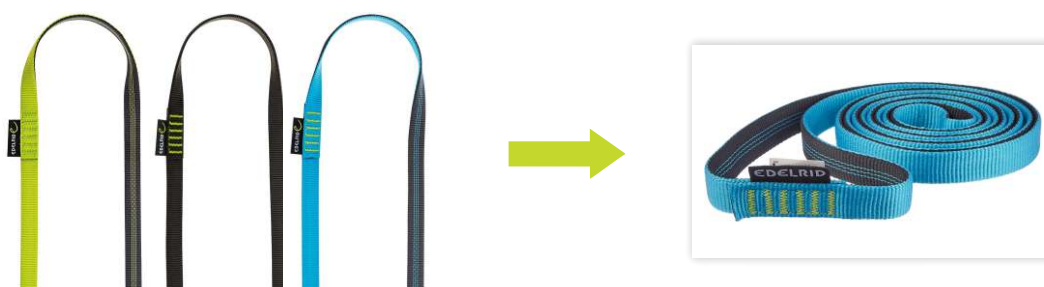

Fig.: Tensile strength double bowline as a percentage of the original strength of the sewn sling.

MRP	₹9500

SMART BELAY DEVICE

SMART BELAY are the intercommunicating roller carabiners. If one of the carabiners is opened, the opening mechanism of the other carabiner is automatically blocked. A new feature is the magnetic locking device: the opening mechanism of the SMART BELAY is only released by an integrated magnet when it comes into contact with the steel rope. Complete unhooking of the system is not possible without additional tools. The advantage: more safety for visitors, less risk for operators.

TECHNOLOGY

SMART BELAY - now with innovative magnet technology with intercommunicating roller carabiners for consistent safety and maximum freedom of movement in high ropes course.

Weight	1.4 kg
Size	85 cm
Safety-Line in height	1,6 m – 2,1 m
