

The **Kegmaster Mini** is a countertop draught beer system that takes up about as much space as a large home coffee machine. It features a single tap, uses a standard power socket, cools beer from room temperatures, and is designed to hold ten-liter kegs. (about 330 fluid ounces or 28 x 12-ounce cans of beer)

The Mini can be powered by 110-Volt AC socket or by 12-Volt DC (cigarette lighter). In addition, when out camping, festival or tailgating you can connect to a small solar panel. The compressor is also powerful enough to keep beverages cold for as long as you need!

## KegMaster Mini

The KegMaster Mini features multiple products already developed by Keg King, including the plastic keg, a coupler that's been developed to easily fit the Mini and the flow control tap.
