This TSB introduces a new idle adjustment design for the 200D Carburetors/Mixers. The original idle was adjusted using a socket head screw shown below (left.) The new design uses a 5/16” or metric 8mm hex key shown below (right) and will accept a tamper resistant plug to comply with emission regulations.

The Tamper Resistant Plug (part number P3-17956-20) must be purchased separately.
