So you want to buy crypto

Your Bank will probably check the 1st or 2nd transactions

Your Aussie bank

So you want to buy crypto

Use PPID, aka PayID, for the transfer and not account to account as this should take less than 10min to arrive from your bank to Coinjar

Your Aussie bank

Send AUD

CoinJar

Swap AUD - BTC

Send BTC

LiquidPro

Send CEL

Swap BTC - CEL

Celsius Network

So you want to buy crypto

Your Aussie bank

Send AUD

CoinJar

Coinjar is the one I use. There are others operating in Aus with different fees such as Coinspot

Swap AUD - BTC

Send BTC

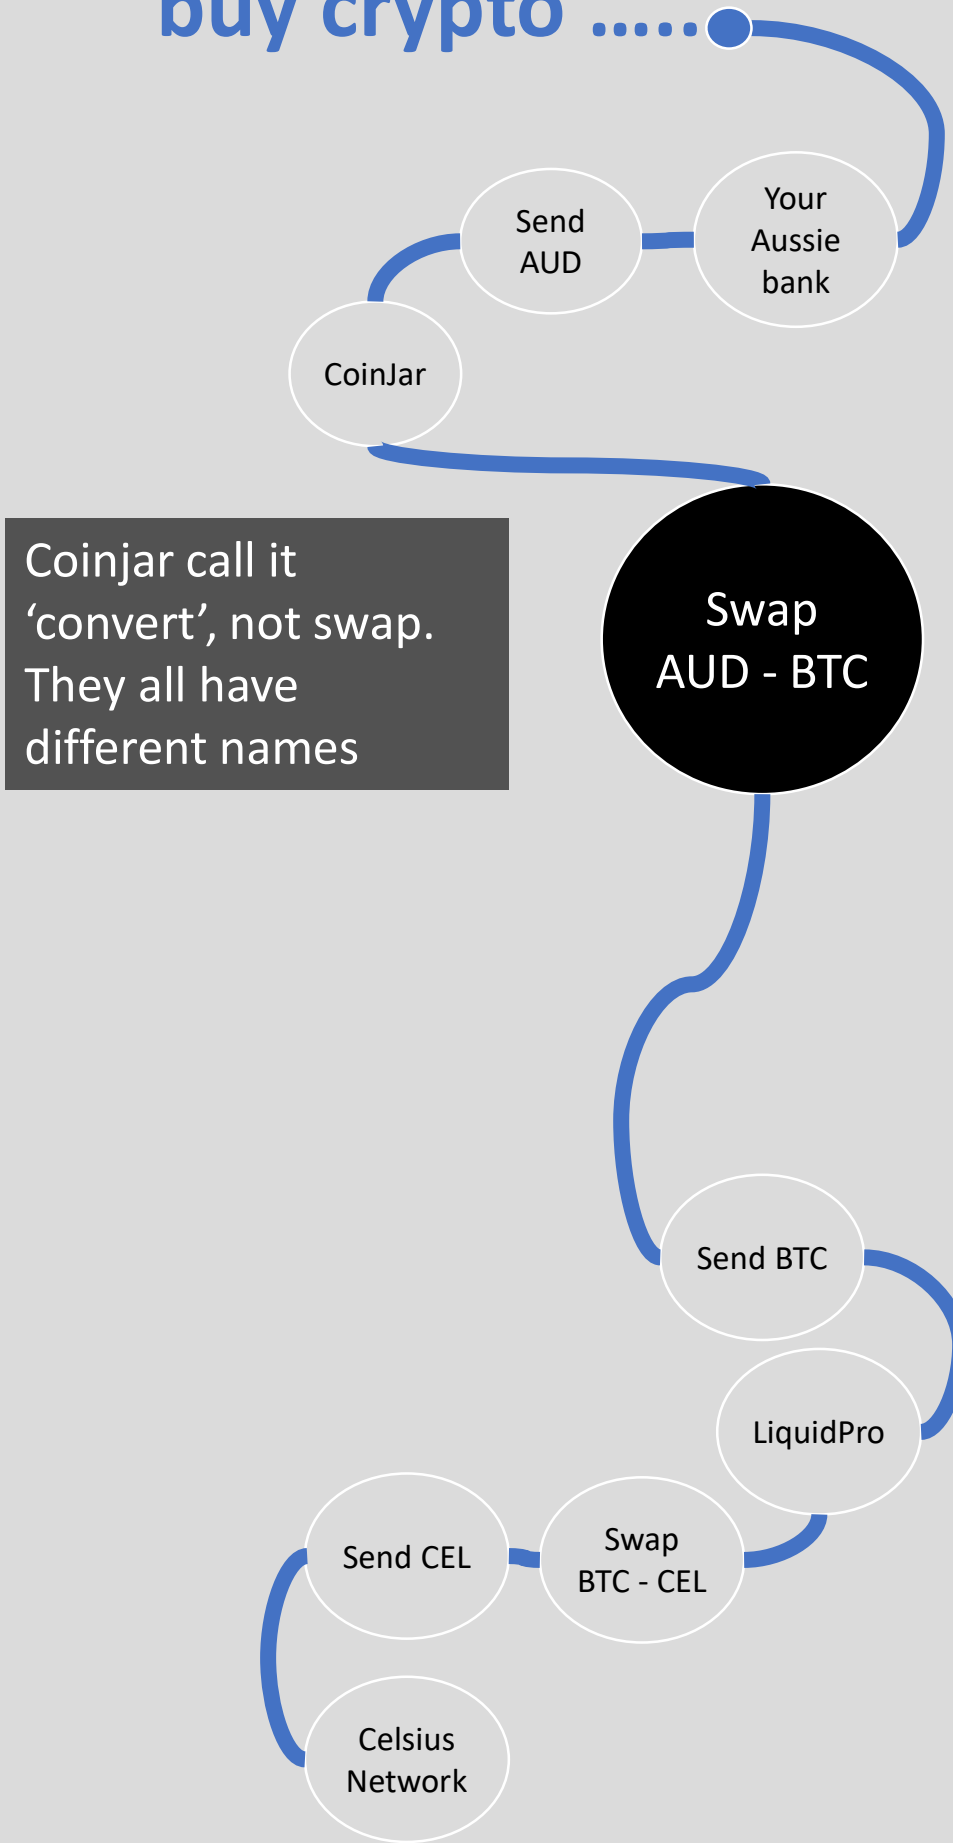

LiquidPro

Send CEL

Swap BTC - CEL

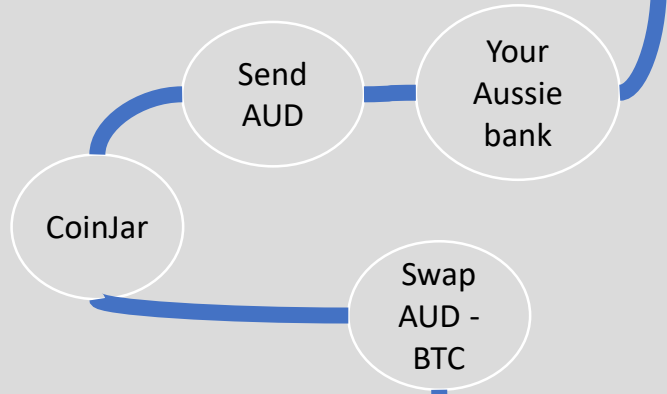

Celsius Network

So you want to buy crypto

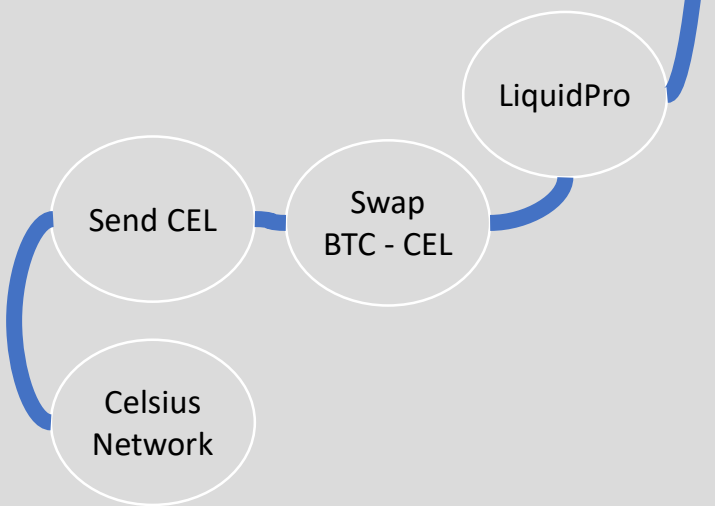

Coinjar call it 'convert', not swap. They all have different names

So you want to buy crypto

You can send ETH too. There's different fees.

So you want to buy crypto

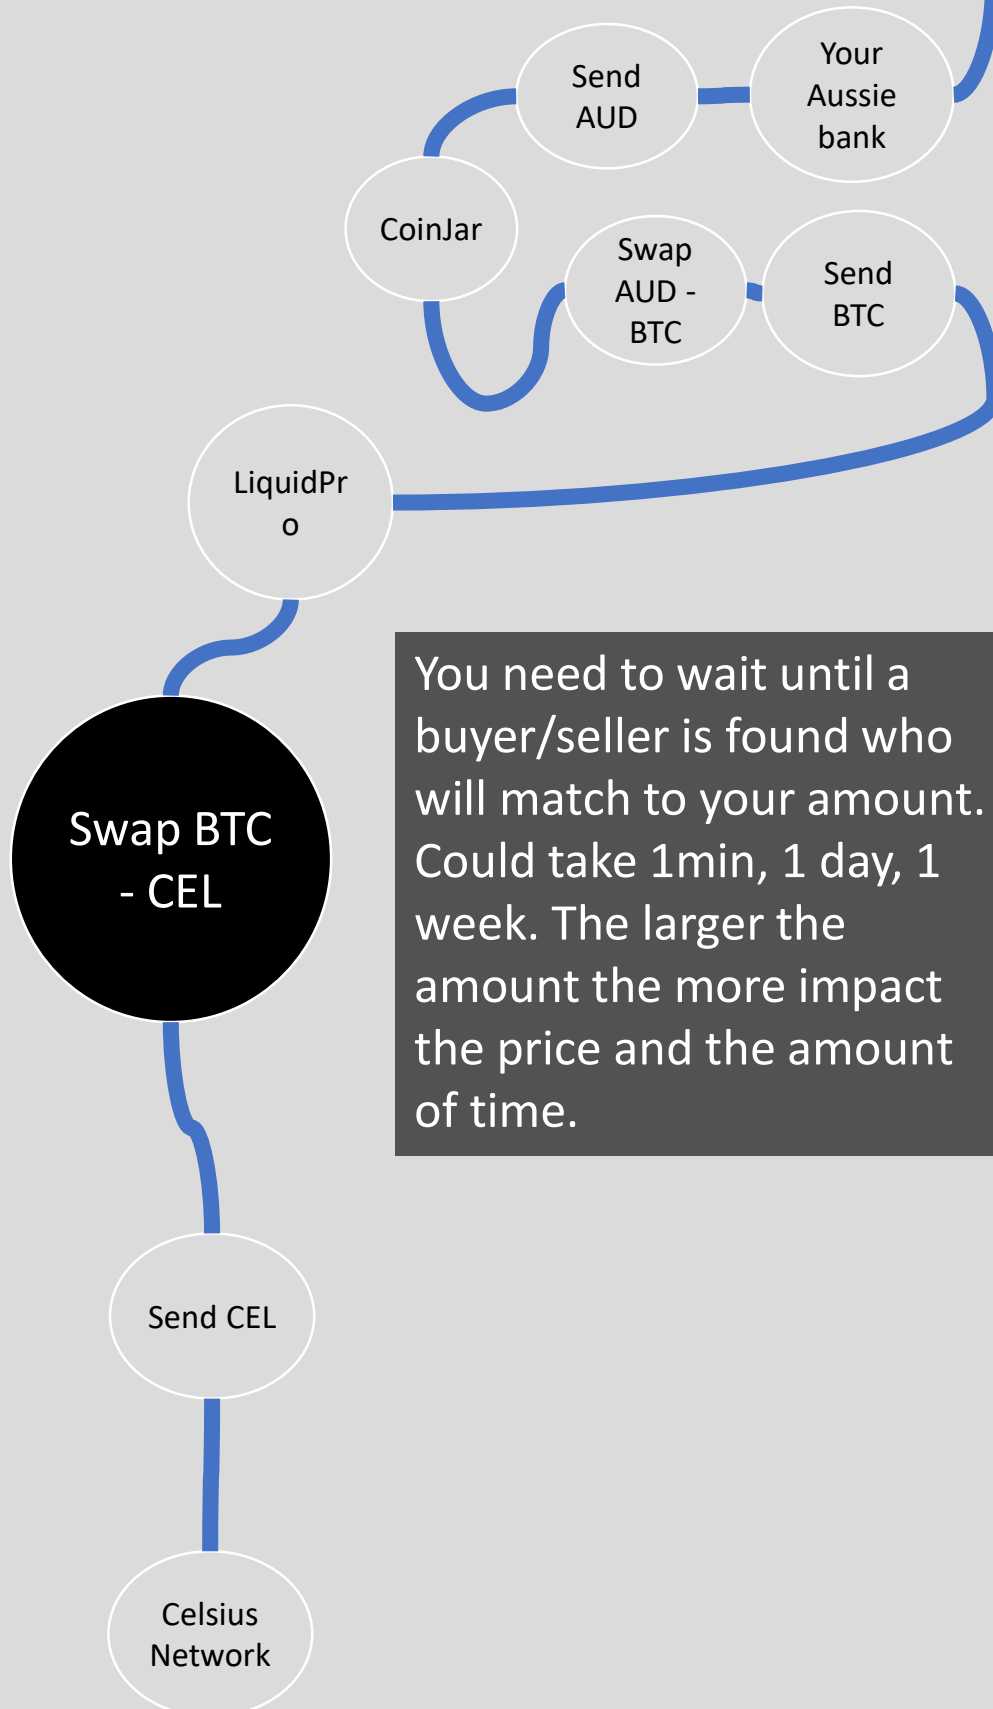

This is one of the MANY exchanges. Others we use include Coinbase & Uniswap. But whatever exchange you use it needs to have CEL. Not many do. Use CoinGecko to find other exchanges that have CEL.

CoinGecko brings together data across all the cryptos and exchanges.

- 2000 crypto currencies
- 400+ crypto exchanges
- 60 million wallet users
- 6000+ tokens

So you want to buy crypto

You need to wait until a buyer/seller is found who will match to your amount. Could take 1min, 1 day, 1 week. The larger the amount the more impact the price and the amount of time.

Recommendations from me on crypto

1. Go with organisations who get your ID, KYC (Know your customer)
2. Think **long-term** investments
3. Capture and share any Negative news, information and reports you find about Celsius Network....we're in this together
4. Setup your withdrawal pathway immediately and perform a test transaction. Then do it regularly so that if you need to rush you're comfortable doing it
5. Send a small amount first, if that gets through then send a larger amount
6. If you use a wrong address in a wallet you'll probably lose the money forever
7. Never put in more than you can afford to lose.....we still don't know how Celsius Network will perform under a falling market

The Alternative Currency Working Group

- Agenda

1. What is a currency? The Medici's created the banking ledger system. It hasn't changed since then
2. We're developing a trust community. Trust in the process, not trust in the person. It's in trust that I am no longer living in scarcity. As I find my money disappearing then adrenaline kicks in and I make bad decisions. When I'm not in a panic my decision making and how I am or treat others is different and closer to who I really am. How do our emotions affect the way we use and treat money?
3. What if instead of taking out a contract for my phone, having to pay them every month....instead I give them an asset. Then Telstra earn the interest from my asset, this covers my phone plan payment. This way Telstra receive but the asset is not reduced.
4. There's an emotional side to this. Doubt, anxiety....talk it out.
5. The toilet paper is on sale.... I buy 5000 rolls because I have the money behind me....but anyone who needs the sale price all the time doesn't have the money to cover it
6. Money is cheap. But assets should cause us to buy quality
7. The wealthy keep assets but take out loans. How is that better? And how is that different to how we, the non-wealthy, take out loans. If I can take out a loan that is not too large in comparison to my asset and I can pay back that loan in a short period then that's a good choice.
8. Diversify your investments and diversify your income. What is passive income and what is active income? How do you free up time to do the things that are important to you. What you're naturally interested in has an option to earn income.
9. Blockchain examples: Immutable. If I give you a dollar I can no longer spend it. Red Cross spent a billion dollars on building 3 houses in Haiti. Instead of this approach of giving use independent resources to verify. A house built and all products recorded on a ledger
10. Micro pymts are possible where artists see an income from their work. Using blockchain.
11. We're in the crawling stages of crypto so it's complex, difficult, lots of jargon and acronyms in HIGH use so try not to feel ignorant or feel like it's too complex/alienating. Instead, ask questions.
12. Tell us what you'd like to know about finance/banking. A safe space to share knowledge
13. We're in this together. Contribute what you know, be suspicious, investigate and share your knowledge. What can you contribute to our knowledge?
14. Getting debt isn't a bad thing. Necessarily. 3rd world can't access lending. When I take out a loan how can I do it such a way that I'm physically, mentally free. What's my goal in taking this loan. I'm not less than if I lose the asset. You are sovereign, the bank is not your master. Tweak your understanding of why you're taking the loan to make sure it doesn't own you.
