

In a world of rapidly changing technology, I have found it difficult to keep up. My son, on the other hand, has been drawn to this world of computer technology. As a self proclaimed “Nerd”, a title he wears like a badge of honor, it was very difficult for him to find other like minded peers. I did not have the skills to teach or help him with the computer knowledge he craved. MILO Coding Academy provided the opportunity for my son to have access to computers, computer coding, and experiences that nurtured his curiosity and interests. He has attended field trips to Microsoft, coded video games, built robots and marched in parades. But the one thing I value the most is the exposure my son gets from MILO. He has seen people of color in many different roles. He has seen college students, professionals, teachers and child authors navigating through the world of computers. MILO has allowed my son to find “his people”.

My son started taking classes with MILO at New Genesis Learning Center and continues with them through WMU’s Coding Club. I am excited for my son’s future with MILO. Their passion for children’s technology education is evident in all that they do. I am grateful for MILO because without MILO my son would not have been able to pursue his love for computers.

Sincerely,

A most grateful mom, Janice Scott
