## 1. Outline of the Prolific-Fund Sector Classification Methodology Book

This methodology book provides guidelines as to how Prolific-Fund Carbon assigns Sector Classification to projects issuing credits in the Voluntary Carbon Market (VCM).

**Section 2** provides an introduction to the Prolific-Fund Sector Classification, including the classification structure.

**Section 3** details the criteria for a carbon project to be eligible for a Prolific-Fund Sector Classification.

**Section 4** lays out the data and underlying sources used in the Prolific-Fund Sector Classification.

**Section 5** introduces the Sector Classification Committee, the internal body overseeing Prolific-Fund Sector Classification.

**Section 6** provides guidelines that Prolific-Fund Carbon uses to classify eligible carbon projects.

**Appendix A** includes the detailed definitions underlying each of the Prolific-Fund Classifications. **Appendix B** lists the previous updates and reviews of the Sector Classification Structure.

**Appendix C** provides a non-exhaustive list of Standard Bodies and the corresponding registries, which serve as a key data source.

## 2. Introduction

The Voluntary Carbon Market (VCM) is attempting to scale but lacks the critical information infrastructure to allow capital to circulate freely. Sector classification is an essential element of financial markets and a critical tool in understanding, analysing and trading in this market.

Sector classifications in the VCM are inconsistent and confusing - there are over 90 defined sectors across the five major Standards Bodies. Inconsistencies across global Standards Bodies include the number and names of sectors covered, the downstream labelling of projects, sub-sectors, and the identification of removal or avoidance credits.

It is therefore difficult to compare projects on a like-for-like basis to ascertain what drives the project's primary avoidance or removal activity, to create accurate sectoral analysis, and to perform portfolio analysis.

The market needs a simplified sector syntax analogous to traditional financial markets, such as

MSCI’s Global Industry Classification Standard.

Prolific-Fund Carbon has developed the Prolific-Fund Sector Classification System to provide the VCM with a standardised, global, accurate and reliable tool to use while participating in this market.

### Overview of Prolific-Fund Sector Classification

The Prolific-Fund Carbon Sector Classification system is a hierarchical sector classification system for the VCM. It comprises three tiers: Sector Group, Sector and Sub-Sector.

The Prolific-Fund Sector Classification comprises 6 sector groups, 18 sectors and 47 sub-sectors. This is presented in the following table and detailed definitions are available in Appendix A. A list of the updates and reviews can be found in Appendix B.

Prolific-Fund Sector Classifications are available in descriptive and numeric form. The full numeric form comprises a 6-digit code.

VCM projects are classified based on a quantitative and qualitative assessment. Each project is assigned a single classification at the sub-sector level based on the primary activity undertaken by the project.

<b>Sector Group Code</b>	<b>Sector Group</b>	<b>Sector Code</b>	<b>Sector</b>	<b>Sub-Sector Code</b>	<b>Sub-Sector</b>
<b>10</b>	Energy	1010	Energy Efficiency	101010	<i>Energy Saving Measures</i>
				101020	<i>Fuel Switch</i>
		1020	Renewable Energy	102010	<i>Solar</i>
				102020	<i>Wind</i>
				102030	<i>Hydro</i>
				102040	<i>Geothermal</i>
				102050	<i>Biomass (Heat &amp; Electricity)</i>
				102060	<i>Sustainable Fuels</i>
		1030	Non-Renewable Energy	103010	<i>Non-Renewable Energy</i>
		1040	Energy Infrastructure	104010	<i>Energy Infrastructure</i>

20	Household Devices	2010	Energy Efficient Devices	201010	<i>Cookstoves</i>
				201020	<i>Domestic Biodigesters</i>
				201030	<i>Domestic Lighting</i>
				201040	<i>Residential Heating &amp; Cooling</i>
		2020	Water	202010	<i>Water</i>
30	Industrial Processes	3010	Industrial Emissions	301010	<i>Carbon Capture &amp; Storage</i>
				301020	<i>Carbon Capture &amp; Utilization</i>
				301030	<i>Industrial Methane Emissions</i>
				301040	<i>Nitrous Oxide (N<sub>2</sub>O)</i>
				301050	<i>Ozone-Depleting Substances &amp; Other Refrigerants</i>
				301060	<i>Sulphur Emissions</i>
		3020	Manufacturing Industries	302010	<i>Industrial Process Efficiency</i>
	302020			<i>Alternative Materials</i>	
		3030	Transport	303010	<i>Transport Fuel &amp; Efficiency</i>
	303020			<i>Transport Infrastructure &amp; Management</i>	
40	Nature-Based Solutions	4010	Blue Carbon	401010	<i>Mangroves</i>
				401020	<i>Seagrass &amp; Seaweeds</i>
				401030	<i>Other Wetlands</i>
		4020	Forestry	402010	<i>Afforestation, Reforestation, &amp; Restoration</i>
	402020			<i>Avoided Deforestation</i>	
	402030			<i>Improved Forest Management</i>	
		4030	Soil Carbon & Agriculture	403010	<i>Grasslands</i>
	403020			<i>Peatlands</i>	
	403030			<i>Soil-Related Agricultural Practices</i>	
	403040			<i>Other Agricultural Practices</i>	

Property of Prolific-Fund

50	Engineered Carbon Removals	5010	Biomass-Based Carbon Removals	501010	<i>Biochar</i>	
				501020	<i>Bioenergy With Carbon Capture &amp; Storage</i>	
				501030	<i>Other Biomass-Based Carbon Removals</i>	
		5020		Enhanced Weathering	502010	<i>Enhanced Weathering</i>
		5030		Direct Air Capture	503010	<i>Direct Air Capture With Carbon Storage</i>
	503020				<i>Direct Air Capture With Carbon Utilization</i>	
		5040		Ocean-Based Carbon Removals	504010	<i>Ocean-Based Carbon Removals</i>
60	Waste	6010	Waste Treatments	601010	<i>Agricultural &amp; Organic Waste</i>	
				601020	<i>Landfill</i>	
				601030	<i>Wastewater</i>	
		6020		Waste Reduction & Recycling	602010	<i>Recycling</i>
	602020				<i>Other Waste Management</i>	

### 3. Project Eligibility

Prolific-Fund Sector Classification is assigned to projects and credit issuances. Projects must fulfil the following criteria to be eligible for a Prolific-Fund Sector Classification:

- a. The project must be a carbon credit project that participates or intends to participate in a carbon market such as the VCM or a compliance market.
- b. The project must publicly disclose sufficient information relating to the project's activities, including information on the methodology used to calculate greenhouse gas (GHG) savings and the issuance of carbon credits.
- c. All information provided must come from a credible source and be validated and/or in final form, ensuring that it is reliable over the long term (e.g. the project could be audited by a recognised third-party auditor, the methodology used in the issuance of carbon credits could be developed or approved by a Standard Body listed in Appendix C, sufficient information on the design of the project must be available in the public domain)

## 4. Data & Data Sources

The following information is required for assigning a sector classification:

- Project Name and Project ID
- Project Description
- Methodology used for the emission reduction or removal calculations (and ex-post and ex-ante credit issuance volumes if available)

In the event that the aforementioned data is inconclusive to assign a sector classification, additional project documentation including but not limited to Project Design Documentation (PDD), Greenhouse Gas Plans, Project Validation Report, and Monitoring Reports is required.

This data is typically collected from carbon offset Standards Bodies, as listed in Appendix C, but can originate from other sources as well.

## 5. Prolific-Fund Sector Classification Committee

Prolific-Fund Sector Classification is overseen by a specialist committee constituted for this purpose. The committee is composed of Prolific-Fund's Senior Data Manager and Data Analysts.

The committee is responsible for assignments and changes to all sector classifications, including those which involve qualitative inputs. The committee is the final decision-making body.

The Sector Classification Committee also reviews the Prolific-Fund classification structure and may recommend changes in sector group, sector, and/or sub-sector to best reflect ongoing developments within the VCM.

## 6. Guidelines for Prolific-Fund Sector Classification

Prolific-Fund implements a three-step process in order to classify projects and monitor the classification:

1. Project Data Collection
2. Sector Classification by Primary Project Activity
3. Continuous Review

## 1. Project Data Collection

The process begins with a team of data analysts collecting publicly-available information about a project, as listed in the “Data & Data Sources” section to determine if a project meets the requirements listed in the “Project Eligibility” section.

## 2. Sector Classification by Primary Project Activity

For eligible projects, the Prolific-Fund Sector Classification uses a project’s activities, or the way(s) in which a project removes or avoids GHG emissions, as the main factor in the classification within a Prolific-Fund

sub-sector, with the Sector Classification Committee making determinations in the case of any ambiguity. A project may have one or multiple project activities, leading to one of three outcomes:

### 2.1 One project activity maps to one Prolific-Fund sub-sector

For projects with only a single activity, the said activity maps directly to a singular Prolific-Fund sub-sector. This is then verified by a review of the project’s credit issuances.

For example, a hypothetical project, Example Project A, involves developing and operating a hydropower plant that will deliver electricity to the China Southern Power Grid (CSPG). The credits for this project are issued because this renewable energy source displaces electricity delivered to the grid from fossil

fuel-fired power plants, leading to an avoidance of GHG emissions. As such, the project activity only maps to one Prolific-Fund sub-sector, 102030 Hydro, as shown in Table 1 below.

<i>Level</i>	<i>Code</i>	<i>Name</i>
<i>Sector Group</i>	10	Energy
<i>Sector</i>	1020	Renewable Energy
<i>Sub-sector</i>	102030	Hydro

**Table 1.** Prolific-Fund Sector Classification for Example Project A

### 2.2. Project is applicable to multiple Prolific-Fund sub-sectors and provides quantitative data on credit issuance

If a project has multiple activities, then, the primary project activity, defined as the one accounting for the largest volume of credit issuance during the project lifetime, determines its sector classification.

For example, a sample peatland restoration and conservation project, Example Project B, issues credits for three stated project activities: 1- Wetland Rewetting & Conservation, 2- Reduced Emissions from Deforestation and Forest Degradation, and 3- Afforestation, Reforestation, and Revegetation. However, the project’s design document shows that the majority of the issued credits originate from the first project activity, Wetland Rewetting & Conservation. As such, Wetland Rewetting & Conservation is determined to be the primary project activity for the Prolific-Fund Sector Classification.

<i>Project Activity</i>	<i>Percentage (%)</i>
<i>Sector Group</i>	86.7%
<i>Sector</i>	13%
<i>Sub-sector</i>	0.3%
<i>Total</i>	100%

**Table 2.** *Estimated Lifetime Credit Issuance for Example Project B*

A review of project documentation shows that Example Project B focuses specifically on the “rewetting of drained peatland”, which implies that the primary activity is “Peatlands.” Therefore Example Project B is assigned 403020 Peatlands, as shown in the table below.

<i>Level</i>	<i>Code</i>	<i>Name</i>
<i>Sector Group</i>	40	Nature-Based Solutions
<i>Sector</i>	4030	Soil Carbon and Agriculture
<i>Sub-sector</i>	403020	Peatlands

**Table 3.** *Prolific-Fund Sector Classification for Example Project B*

**2.3 Project activity matches with multiple Prolific-Fund sub-sectors and does not provide quantitative data on credit issuance**

In the case that a project does not provide quantitative information regarding different project activities, the sector classification is assigned based on a combination of quantitative and qualitative analysis using all available information.

For example, Example Project C involves constructing gas extraction wells at a landfill site to collect methane. This captured methane is then used to generate electricity to be sold to the grid.

Property of Prolific-Fund

The publicly-available project documentation provides limited information about credit issuances. After a qualitative analysis of the available documentation, Prolific-Fund determined that the treatment of methane emissions from the landfill site rather than the generation of renewable energy was considered to be a better representation of the overall project. Subsequently, ‘treatment of landfill natural gas’ was determined to be the primary project activity for the Prolific-Fund Sector Classification, leading to the classification as “601020 Landfill” as shown in Table 4.

<i>Level</i>	<i>Code</i>	<i>Name</i>
<i>Sector Group</i>	60	Waste
<i>Sector</i>	6010	Waste Treatments
<i>Sub-sector</i>	601020	Landfill

**Table 4.** Prolific-Fund Sector Classification for Example Project C

## 7. Review Process

The Prolific-Fund Sector Classification undergoes continuous review. On the occasional instance that new information comes to light that may potentially require a change in the sector classification, the classification is reassessed. Such information could include:

- Newly published information about a project
- Updates in the Prolific-Fund sector classification structure
- Stakeholder feedback, either internal or external

## Appendix A: Sector Classification Definitions

### 10 Energy

Projects that achieve emission reductions by increasing the carbon efficiency of energy systems

Sector Definition		Sub-Sector Definition	
<b>1010 Energy Efficiency</b>	Projects that increase the energy and/or carbon efficiency of energy systems by reducing energy demand from commercial and industrial end-users,	<b>101010 Energy Saving Measures</b>	Projects that increase the efficiency of energy systems, by reducing energy demand from commercial and industrial end-users or improving generation output

	improving generation output, or switching to a less emission-intensive fuel	<b>101020 Fuel Switch</b>	Projects that introduce less carbon-intensive, drop-in fuels into a pre-existing generator to output energy at a lower emission intensity
<b>1020 Renewable Energy</b>	Projects that generate energy from renewable energy sources, displacing the use of fossil fuels	<b>102010 Solar</b>	Projects that generate heat and/or electricity from solar energy
		<b>102020 Wind</b>	Projects that generate electricity or mechanical power from wind
		<b>102030 Hydro</b>	Projects that generate electricity or mechanical energy from moving water
		<b>102040 Geothermal</b>	Projects that generate heat and/or electricity from heat within the earth
		<b>102050 Biomass (Heat &amp; Electricity)</b>	Projects that generate heat and/or electricity by the combustion of biomass in stationary applications
		<b>102060 Sustainable Fuels</b>	Projects that generate and/or use fuel created via sustainable methods and feedstocks including but not limited to biofuels and green hydrogen
<b>1030 Non-Renewable Energy</b>	Projects that generate heat and/or electricity from non-renewable energy sources such as natural gas and other fossil fuels	<b>103010 Non-Renewable Energy</b>	Projects that generate heat and/or electricity from non-renewable energy sources such as natural gas and other fossil fuels
<b>1040 Energy Infrastructure</b>	Projects that support the development and/or maintenance of energy	<b>104010 Energy</b>	Projects that support the development and/or maintenance of energy

	related infrastructure, including but not limited to expansion of the power grid, energy storage, and district heating systems	<b>Infrastructure</b>	related infrastructure, including but not limited to expansion of the power grid, energy storage, and district heating systems
--	--	-----------------------	--

## 20 Household Devices

Projects that develop and distribute efficient technologies which serve to lower the emissions associated with household equipment and activities

Sector Definition		Sub-Sector Definition	
<b>2010 Energy Efficient Devices</b>	Projects that develop and distribute energy-efficient technologies which serve to lower the emissions associated with household equipment	<b>201010 Cookstoves</b>	Projects that disseminate energy-efficient cookstoves at the household level
		<b>201020 Domestic Biodigesters</b>	Projects that develop biogas plants at the household level in order to transform waste into renewable biogas
		<b>201030 Domestic Lighting</b>	Projects that distribute energy-efficient lighting at the household level
		<b>201040 Residential Heating &amp; Cooling</b>	Projects that promote energy-efficient heating and cooling at the household level
<b>2020 Water</b>	Projects that improve water access, efficient water usage, and/or sanitation	<b>202010 Water</b>	Projects that improve water access, efficient water usage, and/or sanitation

## 30 Industrial Processes

Projects that lower the emissions associated with large-scale industry

Sector Definition		Sub-Sector Definition	
<b>3010 Industrial Emissions</b>	Projects that reduce or capture the greenhouse gas emissions resulting from	<b>301010 Carbon Capture &amp;</b>	Projects that capture carbon dioxide (CO <sub>2</sub> ) from a point emission source (e.g. fossil fuel energy production) and

	industrial processes	<b>Storage</b>	store it geologically
		<b>301020 Carbon Capture &amp; Utilisation</b>	Projects that capture carbon dioxide (CO <sub>2</sub> ) from a point emission source (e.g. fossil fuel energy production) and use the CO <sub>2</sub> in the production of products (e.g. fuels, chemicals, concrete)
		<b>301030 Industrial Methane Emissions</b>	Projects that reduce emissions of methane (CH <sub>4</sub> ) from industrial processes
		<b>301040 Nitrous Oxide (N<sub>2</sub>O)</b>	Projects that reduce emissions of nitrous oxide (N <sub>2</sub> O) from industrial processes
		<b>301050 Ozone-Depleting Substances &amp; Other Refrigerants</b>	Projects that reduce the emissions of ozone-depleting substances and other refrigerants including hydrofluorocarbons (HFC), chlorofluorocarbons (CFC), and perfluorocarbons (PFC)
		<b>301060 Sulphur Emissions</b>	Projects that reduce sulfur-containing emissions, primarily sulfur hexafluoride (SF <sub>6</sub> )
<b>3020 Manufacturing Industries</b>	Projects that improve the efficiency of industrial processes or involve the use of more sustainable alternative materials	<b>302010 Industrial Process Efficiency</b>	Projects that improve the efficiency of an industrial process
		<b>302020 Alternative Materials</b>	Projects that involve the use of an alternative material either in the case of a feedstock or of a product

<b>3030 Transport</b>	Projects that reduce the emissions associated with transportation	<b>303010 Transport Fuel &amp; Efficiency</b>	Projects that reduce emissions from transportation either through the use of a less emission-intensive fuel or through promoting increased efficiency in the transportation system
		<b>303020 Transport Infrastructure &amp; Management</b>	Projects that support the development and/or operation of transport-related infrastructure and networks

#### 40 Nature-Based Solutions

Projects that protect, restore and manage affected ecosystems

Sector Definition		Sub-Sector Definition	
<b>4010 Blue Carbon</b>	Projects that restore, improve, or maintain the resilience of marine and coastal ecosystems	<b>401010 Mangroves</b>	Projects that expand, restore, and maintain the resilience of mangroves ecosystems
		<b>401020 Seagrass &amp; Seaweeds</b>	Projects that conserve and develop seagrass and seaweed habitats
		<b>401030 Other Wetlands</b>	Projects that expand, restore, or maintain the resilience of wetland ecosystems other than mangroves and peatlands
<b>4020 Forestry</b>	Projects that improve the efficiency of industrial processes or involve the use of more sustainable alternative materials	<b>402010 Afforestation, Reforestation, &amp; Restoration</b>	Projects that involve planting trees or assisting natural ecosystem regeneration, thereby increasing carbon stocks in the project area
		<b>402020 Avoided</b>	Projects that preserve and maintain natural forests that

		<b>Deforestation</b>	would otherwise be cleared or converted, thereby conserving carbon stocks
		<b>402030 Improved Forest Management</b>	Projects that implement more sustainable forestry practices in order to reduce emissions and increase forest carbon stocks
<b>4030 Soil Carbon &amp; Agriculture</b>	Projects that improve soil quality in order to increase carbon sequestration and storage or projects that promote other forms of sustainable agricultural practices	<b>403010 Grasslands</b>	Projects that restore or conserve grassland ecosystems to increase and/or protect carbon stocks
		<b>403020 Peatlands</b>	Projects that involve peatland restoration and conservation in order to maintain and/or restore their role as an effective carbon sink
		<b>403030 Soil-Related Agricultural Practices</b>	Projects that promote sustainable agricultural practices related to soil carbon, including land management
		<b>403040 Other Agricultural Practices</b>	Projects that promote sustainable agricultural practices not related to soil carbon

### 50 Engineered Carbon Removals

Engineered technical solutions that enhance or facilitate the removal of greenhouse gases from the atmosphere

Sector Definition		Sub-Sector Definition	
<b>5010 Biomass-based Carbon Removals</b>	Projects that enhance or facilitate the removal of greenhouse gases from the atmosphere via the	<b>501010 Biochar</b>	Projects that produce biochar via pyrolysis, the partial combustion of sustainable biomass, with

	treatment of sustainable biomass		carbon dioxide (CO <sub>2</sub> ) subsequently stored in soil or non-soil applications
		<b>501020 Bioenergy With Carbon Capture &amp; Storage</b>	Projects that produce bioenergy from combustion of sustainable biomass and geologically store the emitted carbon dioxide (CO <sub>2</sub> )
		<b>501030 Other Biomass-based Carbon Removals</b>	Projects that remove biomass-based carbon dioxide (CO <sub>2</sub> ) by means aside from Biochar or Bioenergy with Carbon Capture and Storage, such as bio-oil and biomass burial
<b>5020 Enhanced Weathering</b>	Projects that accelerate the natural process of rock weathering, which stores atmospheric carbon dioxide (CO <sub>2</sub> ) in carbonate minerals	<b>502010 Enhanced Weathering</b>	Projects that accelerate the natural process of rock weathering, which stores atmospheric carbon dioxide (CO <sub>2</sub> ) in carbonate minerals
<b>5030 Direct Air Capture</b>	Projects that use specialized technology to remove carbon dioxide (CO <sub>2</sub> ) from the atmosphere and either geologically store it or use it as a feedstock	<b>503010 Direct Air Capture With Carbon Storage</b>	Projects that use technology to remove carbon dioxide (CO <sub>2</sub> ) from the atmosphere and store it geologically
		<b>503020 Direct Air Capture With Carbon Utilization</b>	Projects that use technology to remove carbon dioxide (CO <sub>2</sub> ) from the atmosphere and use it to create products containing carbon (e.g. fuels, chemicals, concrete)
<b>5040 Ocean-Based Carbon Removals</b>	Projects that use technological intervention to remove carbon dioxide (CO <sub>2</sub> ) from the oceans	<b>504010 Ocean-Based Carbon Removals</b>	Projects that use technological intervention to remove carbon dioxide (CO <sub>2</sub> ) from the oceans

## 60 Waste

Projects that reduce emissions associated with the waste sector

Sector Definition		Sub-Sector Definition	
<b>6010 Waste Treatments</b>	Projects that prevent and/or treat emissions from organic waste, landfills, and wastewater	<b>601010 Agricultural &amp; Organic Waste</b>	Projects that prevent and/or treat emissions from agricultural and other organic waste
		<b>601020 Landfill</b>	Projects that prevent and/or treat emissions originating from landfills
		<b>601030 Wastewater</b>	Projects that prevent and/or treat emissions originating from wastewater treatment facilities or processes
<b>6020 Waste Reduction &amp; Recycling</b>	Projects that reduce waste through reduction, recycling, and other forms of waste management	<b>602010 Recycling</b>	Projects that recycle oil or non-oil materials
		<b>602010 Other Waste Management</b>	Projects that reduce waste emissions by means aside from recycling and organic waste, landfill, and wastewater treatments
