

KTM 950/990 Adventure Headlight guard

Thanks for purchasing the ZAdventure headlight guard for the KTM 950/990 Adventure

In your kit you will find the main headlight fram and the left an right out riggers
4 x M8 10mm dome hex bolts
4 X M8 nyloc nuts

Please ensure that the the out riggers are the correct wasy up as shown in the picture. Using the nuts and bolts connect the outriggers to the main frame, at this stage do tighten them

Undo the two lower bolts on either side of the motorbikes screen. Offer up you headlight guard and connect it to your screen and headlight using the four bolts you just removed. I found it easier do top and opposite bottom first and repat for oth-

to
er

two again pleas do not tighten them . You now have the opportunity to make sure everything is lined up and central once this is done then please continue to tighten all bolts

Some manipulation of the parts may be required this is perfectly normal
