

Environmental Management System

Modal Planning is committed to minimising the environmental impact of our operations and promoting sustainability within the transportation planning industry. This Environmental Management System (EMS) outlines our approach to identifying, mitigating, and continuously improving our environmental performance.

Environmental Policy:

We have established a clear and concise environmental policy that reflects our commitment to environmental protection. Our policy encompasses a dedication to:

- Comply with all relevant environmental laws, regulations, and standards.
- Continuously seek opportunities to reduce our carbon footprint and minimize waste generation.
- Promote sustainable transportation planning practices among our clients and stakeholders.
- Regularly review and update our environmental objectives to drive continual improvement.

Legal and Regulatory Compliance:

Modal Planning will stay informed about the latest environmental regulations and ensure compliance with relevant laws and standards. We will maintain records of our compliance efforts and work to prevent any violations.

Environmental Aspects and Impact Assessment:

We will identify and assess the environmental aspects and impacts of our operations, services, and projects. This includes evaluating potential effects on air quality, noise levels, energy consumption, and resource usage. Through this assessment, we will prioritise the aspects with significant impacts for targeted action.

Resource Management:

Efficient use of resources is essential to our environmental management efforts. We will strive to:

- Minimise energy consumption in our office spaces and during project-related activities.
- Reduce paper usage through digital documentation and communication.
- Encourage the use of sustainable transportation options among our employees and clients.

Stakeholder Engagement:

We recognise the importance of engaging with our clients, partners, employees, and the community to promote environmental awareness and collaboration. We will communicate our environmental objectives, achievements, and challenges transparently, encouraging active participation in our sustainability efforts.

Continuous Improvement:

Our EMS is designed to be dynamic and adaptable. We will regularly review our environmental performance, set measurable objectives, and track progress toward achieving them. Feedback from internal and external sources will guide our improvement initiatives.

This Environmental Management System reflects our dedication to environmental stewardship and responsible business practices. Through our commitment to continuous improvement, Modal Planning aims to contribute to a greener, more sustainable future for our industry and the communities we serve.
