EMPOLO

WATERMARK CERTIFICATION

EMPOLO

Watermark Certification

This includes specific flow rates for bathroom and kitchen faucets, as well as showers. The economic activities of EMPOLO Watermark are in line with the requirements for Watermark taxonomy.

COMPLIANT WITH STANDARDS

The product must comply with the AS/NZS 3500 series standards or other applicable Australian/New Zealand standards. These standards involve requirements for the design, performance, safety, and durability of water treatment and sanitation equipment.

Quality Control

There must be an effective quality control system to ensure the stability of the production process and product quality.

Environmental Protection and Safety

The product must not cause pollution to water quality and must ensure the safety of users during use.

Product identification

Qualified products must be marked with the Watermark certification mark to demonstrate compliance with certification requirements.

Improving consumer trust

The WaterMark certification mark means that the product has passed rigorous quality and performance testing, allowing consumers to choose with confidence, which helps to enhance the product's market trustworthiness.

Enhancing market competitiveness

Certified products often have a competitive advantage in the market, which is an important way for manufacturers to increase product competitiveness.

Reduce legal risks

Using certified products can reduce legal risks, avoid potential legal liabilities and disputes, and provide better business security for enterprises.

Enhancing corporate image

The WaterMark certification mark represents the high quality, reliability, and environmental performance of products, which helps companies establish a good brand image in the market and attract more consumers and partners.

GERMAN DESIGN

German quality, the definition of life value. Ingenuity, the interpretation of product's value.

EMPOLO insists on a fixed brand concept of flawless structure, preciseness and excellent quality by integrating the element of German minimalism and Chinese low key and this forms EMPOLO's unique style.

The designers pay attention to refining EMPOLO's sincere wish to the end users and put it into the product design. Simplicity and practicability are both taken into consideration to create outstanding applicability and usability, for an upgrade of space aesthetics, to bring the end users ultimate comforts.

Senior architect, Interior designer, Product designer

Aref Faurati is a versatile designer with a background in architecture, interior and object design. He has more than 25 years of domestic and international experience in the design of large scale and complex mixed-use projects; Including hotels, high rise office and residential developments. Aref Faurati bases his design on experience from working in several countries. His design approach is known for its simplicity, artistic and functionality. His qualifications multi disciplinary - painting, architecture, industrial design allow him to express his design in different discipline, with the same vision based on an intelligent functionality and original.

Duke Zhao
Senior designer, Product manager

Graduated from the Art School of Qingdao University of Technology (Industrial design)
Yongrun Industrial Design Director
Founder of Yige Industrial Design

Duke Zhao, a senior creative designer. He has 15 years experience, including 13 years of sanitary product design. The sanitary product design includes the whole line of sanitary products (a series of hardware products, such as closets, bath cabinets, faucets, showers, bathtubs, hardware pendants, etc.). The sanitary industry is a huge integrated system, which ultimately serves the use experience of consumers as the benchmark. The grasp of every detail of sanitary products and the direction of putting them on the market will determine the value generated in the future, which requires us, as designers, to master all aspects of product knowledge. For the development and design of new products and the supporting and planning of existing products, he has accumulated certain experience and ability. He has personal opinions on the future development of the bathroom industry. He has a strong sense of innovation, cross-border integration, product planning and organizational capabilities.

The Eternal Series is inspired by jewelry, linking pure bathrooms with exquisite jewelry, jumping out of conventional thinking and overturning the conventional image of bathrooms. The Eternal series design is a spiritual creation, bringing spiritual enjoyment to the user and a balance between practical function and beauty, bringing a sense of natural comfort.

SHOWER ROOM
To be customized size

- 1) Matt black stainless steel frame
- 2) Clear color tempered glass in 6mm/8mm/10mm
- 3) Stainless steel pull rod , handles, pulleys

Water-saving

Protect limited water resources and connect to the future

Protect limited water resources and connect to the future. In view of the fact that the depletion of water resources seriously affects everyone's daily life, as a supplier of kitchen and bathroom products, we have the responsibility to respond to this issue. Therefore, we reduce the number of products by developing water-saving and comfortable products and promoting them globally. Water consumption during use. We continue to work hard to reduce the amount of water needed to flush toilets and ensure toilets are comfortable to use while still effectively cleaning out dirt. Provides clean and comfortable products, but also environmentally friendly products. By actively reducing carbon emissions during the lifecycle phases, we aim to achieve a comfortable and environmentally friendly everyday life.

Less water, less energy, less money. Our products only use water when it is necessary. At the same time, they are designed to ensure maximum comfort with reduced water usage. Simultaneously pay attention to every quality standard. Energy-saving mode. Our products use energy-saving and efficient technologies. One of the ways the energy required for heating the water in the usage phase is minimized is by reducing (hot) water.

How to do the maintenance of faucet

EMPOLO specializes in the production and sale of high-quality bathroom and kitchen faucets, following international standards and certifications. Here we provide advice on how to clean and maintain your faucets, the importance of daily cleaning, and the need to use the right tools and cleaning agents. At the same time, there are special care methods for faucets of different materials and colors.

Cleaning frequency

Daily use of faucets will cause their appearance to deteriorate over time. In order to extend the life of the faucet and maintain its appearance, it is recommended to clean it every day or at least two to three times a week. After use, soap and water residues should be removed immediately, as these residues may damage the surface of the faucet.

Cleaning tools

When performing regular cleaning, you should use a soft cloth to wipe off water droplets and avoid using abrasive products or sponges that can scratch the surface. Cleaners with a neutral pH value should be used, and make sure to dry the faucet thoroughly after using it to prevent limescale accumulation.

Products to avoid

Never use abrasive cleaners, chemical cleaners, bleach, polishes, waxes or any acidic products, including homemade lemon spray or traditional vinegar. These products will damage the faucet and make it impossible to restore it to its original condition.

Recommended product

For the proper maintenance of the faucet, you can use a non-abrasive special cleaning agent and follow the manufacturer's instructions. Cleaning with white vinegar, hot water and soap with a neutral pH value is a simple, effective and economical solution.

Ventilation recommendations

Frequent ventilation is recommended to avoid condensation in the bathroom, humidity and the accumulation of fluctuating methane gases in the sewer system. To prevent the latter, the water seal must always be kept full of water.

Disassembly and cleaning

The faucet's aerators or filters should be disassembled regularly, as impurities in the pipes can accumulate and block the water flow, significantly reducing the flow. The easiest way to do this is to remove it and soak it in hot water with a small amount of non-corrosive detergent. After a few minutes, the lime accumulation will dissolve, and then put it back in place.

Hard water area treatment

If you live in an area with hard water, in order to prevent limescale formation, you must thoroughly dry the surface with a soft cloth after each use.

Maintenance of colored faucets

Colored faucets require more careful maintenance than traditional chrome faucets. Continuous cleaning is necessary to avoid bigger problems, use warm water close to cold, a soft microfiber cloth and a neutral pH soap.

Descaling

If there is already limescale on the tap, it is recommended to clean it with vinegar. Wrap the affected area of the tap with a cloth soaked in vinegar. If lime stains are still present, the cloth can be wrapped around the tap for a longer time.

PVD-coated taps

All the above recommendations also apply to the new color range of EMPOLO. Products taps treated with PVD technology. With continuous maintenance and surface drying, the PVD coating provides additional protection against stains, wear and UV radiation, preventing the color from fading or losing its gloss.

The best approach is continuous maintenance and the use of soapy water with a neutral pH, which will extend the life of the tap. EMPOLO has a long experience in the production and sale of bathroom and kitchen taps, always complying with international standards and certifications, using the best raw materials on the market, such as high-quality brass, the famous Sedal brand and Neoperl brand cartridge, which has allowed the company to be widely represented in the domestic and foreign markets.
