

CARE UNDER FIRE

TRAINING

Exigent Care Training Course

Definition: ex-i-jent / ek-sə-jənt: requiring immediate action or aid; urgent; pressing

This course is based upon the NAEMT's (National Association of Emergency Medical Technicians) TECC (Tactical Emergency Casualty Care) training program. TECC teaches EMS practitioners, law enforcement officers and responsible citizens how to respond to and provide pre-hospital care for casualties in adverse environments. This introductory course is designed to decrease preventable deaths in situations such as an active shooter event, traumatic automobile accidents as well as active lifestyle, sports and hunting related incidents.

This training, which includes the American College of Surgeons **STOP THE BLEED** training course, focuses on controlling massive bleeding along with an introduction to the full MARCH casualty assessment and treatment protocol, including the application of items commonly found within the standard IFAK (individual first aid kit) such as tourniquets, hemostatic gauze, chest seals, NPA's, etc.

Prerequisite: None

Course Fee: \$89.00

Duration: 4 hours
