

Frequently Asked Questions – SPLITTER BLADES

1	Do you recommend getting a better splitter and then getting you to make the blade? I've had nothing but hell keeping mine adjusted.
2	What is the difference between the older and newer Osborne 84 splitter blades?

Do you recommend getting a better splitter and then getting you to make the blade? I've had nothing but hell keeping mine adjusted.

The blade is the most important feature of the splitter. I can make one custom to fit most any splitter, if you will send me your existing blade.

What is the difference between the older and newer Osborne 84 splitter blades?

The newer version is about 3/16" shorter in the overall length. It also has a pocket milled into the top of the bolt slot. These two differences make it extremely difficult to fit a new blade on an older frame. I only make the older version.
