

Tripwire At-a-Glance

Cyber integrity for foundational controls to strengthen your security and compliance

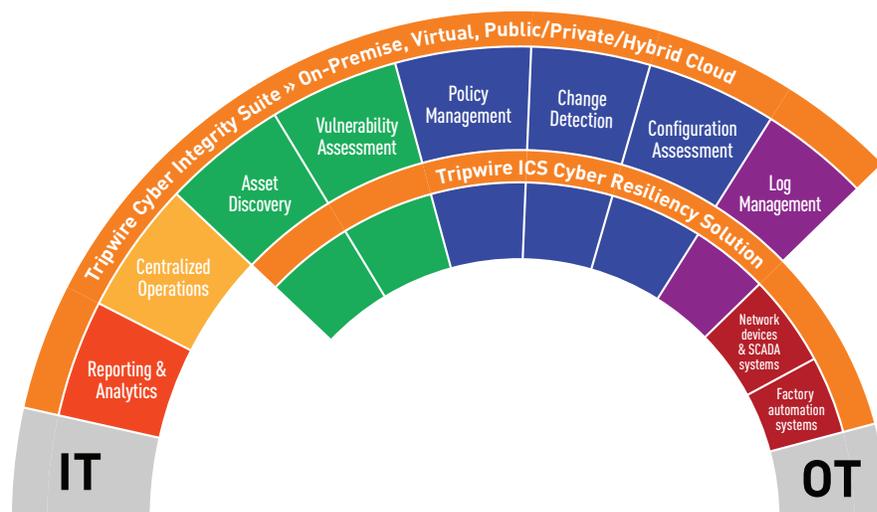

Tripwire’s integrated suite of products build on their core capabilities to deliver critical capabilities for breach detection and remediation, and address nearly every compliance standard—PCI DSS, NIST, FISMA, NERC, HIPAA, ISO/IEC 27002, DISA, SOX and many others.

Imagine becoming more effective and efficient at managing your security infrastructure. Tripwire has always been the leader in File Integrity Monitoring and Change Control, but we offer much more. Today Tripwire delivers a portfolio of foundational controls for cyber integrity across enterprise infrastructures. Our solutions provide effective security, continuous compliance, and reliable IT operations for enterprises, industrial organizations, service providers and government agencies.

Tripwire solutions are based on high-fidelity asset visibility and deep end-point intelligence, combined with business context. Together, these solutions automate and integrate security and operations in IT and OT environments. Each solution has core capabilities in different areas in the information security space. They help you make better, more informed decisions to solve your most complex security and compliance challenges.

Tripwire capabilities

Tripwire’s cyber integrity suite includes file integrity monitoring, configuration management, asset discovery, vulnerability management and log collection capabilities that support wide-ranging industry-standard frameworks and regulations.

The Tripwire product portfolio

Tripwire® Enterprise pairs the industry's most respected file integrity monitoring and security configuration management to provide real-time change intelligence and threat detection. For the compliance officer, it delivers proactive system hardening and automated compliance enforcement—resulting in a reduction of audit cycles and cost. Tripwire Enterprise delivers automation and guidance for rapid repair of broken or insecure misconfigurations, and integrates with SIEMs, ITSM, IT-GRC, workflow systems and more.

Tripwire Configuration Compliance Manager (CCM) automates continuous configuration and compliance assessment. With its agentless architecture (no software to install on endpoints) management is simplified and cost effective. Integrated with other Belden network security solutions, Tripwire CCM provides new security capabilities for rapidly expanding industrial cybersecurity needs.

Tripwire IP360™ proactively discovers, profiles and assesses the vulnerability risk of all wired and wireless devices on an organization's network. Tripwire IP360 enables fast detection of vulnerabilities, prioritization of risk, remediation management through reporting and ticketing integrations, and risk-prioritized exposure assessment.

Tripwire Log Center® provides secure and reliable log collection to add real-time intelligence to machine data, with

security analytics and forensics for rapid incident detection and response. Tripwire Log Center integrates with your existing infrastructure and includes a growing library of available correlation rules that empower your team to monitor, detect and quickly respond to threats in your environment.

Better Together

Tripwire uniquely delivers the integration of security configuration management, vulnerability management and log management to allow you to achieve faster—and more accurate—security and compliance in both IT and OT environments.

While each product in the Tripwire portfolio provides valuable capabilities in a stand-alone implementation, customers receive maximum value when they are integrated—with each other or with third-party products.

Tripwire's integrations with a wide array of third-party products offer a range of benefits and use-cases by distinct categories:

- » Threat Intelligence
- » Network Security
- » Analytics and Security Information & Event Management (SIEM)
- » IT Service Management (ITSM)
- » Integrated Access Management (IAM)
- » Industrial Control Systems (ICS)
- » Factory Automations Systems (FAS)
- » Government Risk Compliance (GRC)

Integrations provide you with relevant context to make the right decision in a timely manner, and automate the sharing and validating of critical data and intelligence, delivering you significant operational efficiencies. They also enable better collaboration between your IT operations and security teams, driving higher productivity, while automation enables you to act on the shared, purposeful intelligence. The net gain is your threat detection and remediation is faster and more accurate. When you are under siege, a silver bullet won't do—you need an arsenal!

Summary

Tripwire provides the advanced foundational controls that should serve as the bedrock for your security and compliance efforts. With the bonus of integration and automation, our solutions further enhance the operational efficiency of maintaining a known and trusted state and responding to threats.

Tripwire is a leading provider of security, compliance and IT operations solutions for enterprises, industrial organizations, service providers and government agencies. Tripwire solutions are based on high-fidelity asset visibility and deep endpoint intelligence combined with business context; together these solutions integrate and automate security and IT operations. Tripwire's portfolio of enterprise-class solutions includes configuration and policy management, file integrity monitoring, vulnerability management, log management, and reporting and analytics. **Learn more at tripwire.com**
