

CLASSIFIER REPORTING

DEMONSTRATING COMPLIANCE AND
VERIFYING USER BEHAVIOUR

Data classification delivers many benefits but it's important that you can measure that success and demonstrate the value to your compliance and governance teams. Classifier Reporting provides a reporting infrastructure, the Classifier Reporting System, together with a fully featured reporting tool in the form of the Classifier Reporting Console.

All Classifier products contribute to a comprehensive audit trail through the common services of the Classifier Platform. Classifier Reporting utilises this rich activity data to provide both structured audit data and a powerful analytics toolset.

As information security becomes more people-focussed the need to 'Trust but Verify' your user's behaviour is critical and Classifier Reporting fully supports you in that mission.

KEY ADVANTAGES

- ▶▶ **DEMONSTRATE VALUE**
- ▶▶ **HIGHLIGHT COMPLIANCE**
- ▶▶ **UNDERSTAND BEHAVIOUR**
- ▶▶ **EXTEND AND INTEGRATE**

CLASSIFIER REPORTING KEY FEATURES

PRODUCT DATASHEET

DEMONSTRATE VALUE

OUT-OF-THE-BOX

Built in dashboards and reports provide a 'load and go' capability with a sample database to illustrate the full solution value, and help you tailor the views and reports to your needs

FULLY CUSTOMISABLE

Simple to use editors are provided for Dashboards and Reports so that you can fully tailor the reporting outputs to reflect your policy and business needs.

HIGHLIGHT COMPLIANCE

DASHBOARD VIEWS

Graphical dashboard views provide a rapid assessment of current status and trends, each with a drill-down capability to provide more granular information as required

REPORTS

Flexibility to generate and distribute reports and dashboard views as PDF documents and other file types, tailored for specific audiences within your business. .

UNDERSTAND BEHAVIOUR

FORENSIC QUERIES

Drill-down from the dashboard summaries into the underlying data in order to reveal contributing factors such as anomalous user behaviour

TREND ANALYSIS

Use timeline analysis to highlight behavioural patterns and identify insider threats

EXTEND AND INTEGRATE

AUDIT DATABASE

An audit database forms the core of the Classifier Reporting System with an open schema allowing you to easily export the data to other analysis tools such as SIEM and predictive analytics. The SQL database extends the Classifier Platform to offer third-party solutions the ability to extract structured audit data

DIRECTORY INTEGRATION

Built-in integration with Microsoft Active Directory allows user identities and departmental membership details to be included in the reports.

EASY EXTENSION

Tools such as Microsoft Excel can be easily used to extract audit data and create reports combining data from other sources.

SOFTWARE REQUIREMENTS

- Windows 7 or later (32-bit or 64-bit)
- Microsoft NET Framework 4
- SQL Server 2008 or later
