

DISCHARGINATOR FILTRATION SYSTEM

FIELD-READY FILTRATION. BUILT TO KEEP BLENDERS RUNNING.

DESCRIPTION

The Discharginator Filtration System is a skid-mounted, customizable filtration package for high-flow frac blender applications. It can be used on the clean inlet side or post-discharge pump side and is built for fast service, dependable operation, and long field life.

FEATURES

- Skid-mounted customizable design
- 14" header with 6", 8", and 10" ports
- Discharginator-style fabricated construction
- Replaceable double-wall stainless wire mesh filter
- Isolate and replace filter in minutes
- Backup and bypass manifold options
