Lifting smoothing
lip treatment

Hyaluronic Acid. We use only low molecular weight hyaluronic acid because it is more easily absorbed into the skin making it much more effective than lower quality versions.

When absorbed into the skin it attracts moisture and locks it in. A quarter teaspoon of hyaluronic acid can absorb about one and a half gallons of water. It's proven to aid in wound healing because it elevates collagen levels in order to heal skin. This also makes it very effective at smoothing fine lines and wrinkles.

Raw Shea butter deeply moisturizes and softens lips, boosts collagen production naturally, and gives it a creamy luxurious feel that stays on for hours.

Cold pressed, first press extra virgin olive oil. Not all olive oil is created equal. Olives go through a series of pressings when making olive oil. The first press produces the highest quality oil with all of its natural therapeutic properties intact. Each press produces a gradually lower quality oil. We use only the highest grade olive oil which some studies suggest rivals the anti-inflammatory power of ibuprofen making it a perfect match for inflammatory skin conditions.

This olive oil absorbs deep into skin and locks in moisture all day.

Grade A triple filtered yellow beeswax forms a light breathable protective barrier to protect lips. It's also high in vitamin A which helps the delicate skin on your lips repair itself.

Spearmint essential oil increases blood flow in the lips giving them a smooth plumped up appearance without the burn of other lip plumpers.
