

Eiger Express Pipeline Overview

Project Overview: Eiger Express Pipeline

The Eiger Express Pipeline project consists of approximately 450 miles of up to 48" diameter pipeline and is designed to transport up to 3.7 billion cubic feet of natural gas per day from the Permian Basin in West Texas to the Katy, TX area.

As natural gas production in the Permian Basin continues to grow, the Eiger Express Pipeline will provide critical takeaway capacity by moving product to market for end use, as well as play a significant role in enhancing our nation's energy security, reducing energy costs, and minimizing emissions related to flaring. Construction is currently expected to begin in 2027 and conclude with an in-service date of mid-2028.

Economic Benefits

- Provide electricity to approximately **37.8 million homes**
- Generate an estimated **~\$28.5¹ million annually** in state and local tax revenue once fully operational
- Increase patronage of **local businesses, restaurants, and hotels**
- Promote the use of **American-made steel and compression equipment**

Our Commitment to Landowners

The Eiger Express Pipeline is committed to being a good neighbor and incorporating feedback from all relevant stakeholders into both the proposed route and the project's overall design.
