

Robot Recall – Investor Snapshot

The Vision

Robot Recall is creating a world where people can explore, attend, inspect, and interact in real-time - through humanoid robots stationed around the globe. We call it Remote Reality - and we're building the platform that makes it possible.

Opportunity

We are opening a \$6M Seed Round to fund our first fleet of deployable Tesla-inspired humanoid robots and scale our cloud-based remote control infrastructure.

Target Markets:

- Tourism & Travel
- Virtual Events
- Remote Inspections
- Education & Training
- Public Access & Inclusion

What We've Built

- Prototype hardware architecture inspired by Tesla Bot
- Real-time remote control interface (via browser or VR headset)
- Secure streaming & control over 5G, Starlink, and Wi-Fi
- AI-assisted navigation & safety protocols
- Integrated platform for user scheduling and robot booking

Why Now?

Human presence has gone digital - we're the first to bring physical presence with it. Advancements in robotics, low-latency networks, and AI make this moment possible. The remote economy is booming: travel, work, education, and entertainment all demand new solutions.

Company Snapshot

Founded: 2024

Founder & CEO: Chris Ecklesdafer

HQ: Warren, Michigan

Legal Entity: Robot Recall, LLC

Website: www.robotrecall.net

Join the Mission

We are looking for:

- Strategic investors
- Robotics & AI VCs
- XR and Metaverse partners
- Forward-thinking angels
