From the Editor-in-chief's Desk

I am happy and proud to announce the release of the fifth issue of AgriTech Today Magazine. In this issue, we were excited to include the cover story on Role of ChatGPT in Agricultural Engineering.

ChatGPT can find several applications in agriculture and allied sciences. It can assist farmers in crop management by providing real-time information on weather conditions, pest and disease identification, and optimal planting times based on local data. Additionally, it can offer guidance on sustainable farming practices, such as crop rotation and irrigation management, to improve yield and reduce environmental impact. ChatGPT can also be employed in supply chain management, helping farmers connect with buyers and distributors more efficiently. Furthermore, it can serve as a knowledge resource, offering information on agricultural best practices and the latest research findings to empower farmers with up-to-date insights for informed decision-making.

It gives me great pleasure to inform you that we have curated and finalized 59 articles for publication in this issue.

My sincerest hope is that this issue will provide readers with valuable insights into agricultural technologies and innovations. I extend my heartfelt gratitude to the dedicated editorial team and the talented authors for their invaluable contributions in bringing this issue to fruition. Your efforts have played a pivotal role in making AgriTech Today Magazine a source of enlightenment and knowledge in the agricultural domain.
